1899.

Tentamen Floræ Lutchuensis.

Sectio Prima.

PLANTÆ DICOTYLEDONEÆ POLYPETALÆ.

AUCTORIBUS

Tokutaro Ito,

Societatis Linnaeanæ Londiniensis Socius,

et

Dr. J. Matsumura,

in Universitate imperiali Tokyoensi botanices Professor.

Introduction.

The rich vegetation of that beautiful archipelago, which lies scattered in the warm sea bathing the coasts of Eastern Asia, and which forms, as it were, stepping-stones between the south-eastern extremity of Japan and Formosa, is as yet imperfectly known. This archipelago, known as the Lûchû or Liukiu Islands, consists of several groups of islands of various sizes and configuration. The largest and by far the most important is Uchinâ or Okinawa, whose length is about seventy miles, and whose breadth varies from two to nineteen miles; whose northern part is rough and mountainous, rising to an elevation of some 1,500 feet; and whose inhabitants were so graphically described by Captain BASIL HALL¹⁾ more than three-quarters of

a century ago, when he wrote that they "wear a loose dress, tied with a belt round their waist, their hair is brought tight up from all sides, and formed into a knot on the top of the head, with two metal pins stuck in it," and "this dress is naturally so graceful, that even the lowest boatmen have a picturesque appearance."

The investigation of the beautiful flora of such a fairy-land should, therefore, prove not only very interesting to the public, but also not without importance as a contribution to the present state of our scientific knowledge of Eastern Asia.

The present work is intended to be simply a preliminary contribution to the botany of these islands. The authors' labours will be amply repaid, if they serve to facilitate further researches in the same field.

The materials upon which the work is based are as follows:—

1. A small, but interesting, set of some 124 species, many of which, however, are in fragments, collected by Mr. YAMADA of the University of Tōkyō, during his short stay for the purpose of physical observations at Nāfa in the island of Uchinā, and at Nazé in the island of Amami-Ōshima in August, 1882.

2. Mr. Y. TASHIRO's important collection made in 1887, and preserved in the Herbarium of the College of Science of the Imperial University of Tōkyō. This collection, hitherto but partially examined and determined, though more than a decade has elapsed since it was made, now at length finds full recognition in the present work. It covers the widest area in the Lûchû Islands, including Amami-Ōshima, Uchinā, and the Myâku and Yêma (or Yayeyama) Archipelagoes, and consists of some 600 species of Phanerogams and Vascular Cryptogams.

3. An excellent collection, by Mr. SETSUSABURŌ TANAKA, now Assistant Professor in the College of Agriculture of the Imperial University of Tōkyō, made in 1891 in the islands of Amami-Ōshima, Uchinâ, Myâku, Ishigachi, Irumuti, and Yunakuni, the last being a small island situated close to Formosa and then for the first time botanically explored; he also collected some plants in Tané-ga-shima, an island situated near Kyūshū in the southern part of Japan, and has generously placed at our disposal the whole collection numbering about 489, besides many duplicates.

4. A small set of plants collected by Mr. H. NAKAGAWA, formerly Professor in the High School at Kumamoto, during his biological mission to the islands of Amami-Ōshima and Uchinâ in 1892.

5. A rich collection made by one of the authors, T. Itō, who, while Professor at the Zōshikwan College at Kagoshima, in the province of Satsuma, visited in 1894, the islands of Amami-Ōshima, Uchinâ, Myâku, Irabu, Ishigachi, Irumuti, Takidun, Kubama, Aragushiku, Kuru-shima, Uchibanari and Sutubanari. His collection from these islands, comprising 929 numbers, besides several fine sets of duplicates, is the most comprehensive hitherto made, and forms the basis of the present work.

6. A small number of plants gathered at Binnu-taki in the island of Uchinâ and kindly sent to T. Itō by Mr. RINGEN TIRA, a Luchuan gentleman who accompanied the former in the mountainous districts of Kunjan in the same island during that author's botanical tour in the year 1894.

7. A set of some 42 species collected in Myâku-jima in 1895 by Mr. SHUMPŌ TATITU, a native gentleman of the same

island who is a young and zealous student of science, and twice accompanied Itō during the latter's botanical journeys in that district.

8. A small, but exceptionally interesting, set of plants collected in the mountainous regions of the island of Ishigachi in 1895 by Mr. YASUICHI ARAGACHI, a highly cultivated Luchuan gentleman, who accompanied and zealously assisted Itō during his botanical tour through the islands of the Yêma Archipelago, and afterwards came to Kagoshima during the author's residence in that romantic city, for the purpose of studying English, being admitted into Itō's family for more than a year.

9. A small set of plants gathered in the island of Uchinâ in 1894 by Mr. KINNOSUKÉ HIRASAWA, who accompanied Itō to the same island. These plants are now preserved in the Normal School at Kagoshima, whence they have been kindly forwarded for examination by Mr. SAKUTARŌ HIGASHI.

10. Lastly, an interesting collection made by Dr. J. MATSUMURA, during a botanical tour in the island of Uchinâ in 1897.

There yet remains the pleasant duty of expressing our indebtedness and gratitude to all those gentlemen who have assisted us in various ways. To Baron NARABARA, Governor of the Lûchû Islands, we are especially indebted for the warm reception accorded to us during our visits to the archipelago over which he rules, and whose kind influence and personal interest in scientific investigation afforded us special facilities; to Baron UZUHIKO SHIMAZU and to Professor UMEKICHI YATABÉ, by whose kind recommendation one of the authors, Itō, was

enabled to proceed for the purpose of botanical investigation to the Luchuan Archipelago; to Professor SETSUSABURŌ TANAKA for his kind generosity in submitting the whole of his important collection for determination; and to Mr. SAKUTARŌ HIGASHI, of the Normal School at Kagoshima, for the loan of some interesting specimens of Luchuan plants belonging to the same school.

Our thanks are also due to Messrs. SHINTARŌ OGAWA and HISASHI KUROIWA, the latter of whom accompanied Dr. MATSUMURA as far as Kunjan in the island of Uchinâ. Nor must we omit the name of Mr. ISABURŌ ITŌ, who accompanied T. ITŌ to the Lûchû Islands and assisted him in every possible way. The most grateful thanks of one of the authors are due likewise to the three young and highly cultivated Luchuan gentlemen, Messrs. TIRA, TATITU, and ARAGACHI, all of whom accompanied ITŌ in his botanical tours through the island of Uchinâ, the Myâku Group, and the Yêma Archipelago, respectively.

To these and to all other friends by whose kind assistance we have been so fortunate as to profit, we tender our heartiest thanks.

Tōkyō,

23rd March, 1899.

ARCHIPELAGO YĒMA (*Tashiro*! Aug. et Sept. 1887, flor.).

DISTRIB. Japan.

Scandent, slightly pubescent. Leaves ternate or biternate, leaflets small, ovate or lanceolate, acute, 3-lobed, or sub-bilobed, or entire, sometimes with a few serratures; petiole slender, 2-5 cm. long. Peduncles very slender, 1-flowered, 1½-4 cm. long, axillary from the base of leaves, or 3-6 flowers clustered near the end of young branches, with 2 small opposite ovate obtuse bracts either near the middle or near the base. Flowers white. Sepals 4, spreading, ovate-lanceolate or linear-elliptical, about 15-20 mm. long, acute, with 3 reticulated veins; inside smooth, pubescent on the back. Stamens purple, smooth, shorter than the sepals, the filaments of the outer ones dilated, anthers small, linear, obtuse. Achenes numerous, furnished with long hairs.

I observed this species in various localities on Amami-Ōshima in July 1894, but it was too early for flowers. Mr. Setsusaburō Tanaka collected some specimens at Tané-ga-shima, a small island lying between Amami-Ōshima and Kyūshū in southern Japan. [T. Itō].

C. sp.

INSULA UTCHINÂ : in tractu Kundjan inter Tchatan et Unna (*T. Itô*, n. 997, 22 Aug. 1894, steril.).

Leaves pinnate, glabrous; leaflets 3 or 5, ovate or oblong-ovate, often ovate-lanceolate, acute or acuminate, rounded or retuse at the base, entire, thin, green after desiccation.

This is an interesting species, but unfortunately the specimens are sterile and too imperfect for further determination.

There is also a juvenile specimen, of a species of *Clematis*, collected by Tashiro in July 1887 in Kushi-majiri in Kunjan in the island of Uchinâ, at present indeterminable, but the leaves are somewhat allied to the above species, from which nevertheless it differs by the leaflets having turned dark-brown in drying. The leaves in this specimen are 5-foliolate, with the leaflets lanceolate, acuminate, entire, and smooth.

DISTRIB. Japan, Formosa, China, Mandshuria, and Himalaya.

NOM. LUTCH. : Kûgâ (Y*) ex *T. Itō*.

The fruits of this species are gathered and eaten by the natives of Ishigachi ; while in the island of Takidun, they are offered to the deity at the Sōrō-unké festival.

As to the limitation of this species, we follow Bentham (in Journ. Linn. Soc. V. p. 55). The specimens collected in Amami-Ōshima are glabrous, and the branches are furnished with rufous lenticels. Leaves glabrous chartaceous, shining above, glabrous below, ovate or elliptical-lanceolate, acuminate, base acute or subcordate, setose-serrulate, 8-12 cm. long, 6-7½ cm. broad ; petiole 4-5½ cm. long. Fruits edible, 1½ cm. long, oblong-globose, verrucose, stigma not persistent, calyx small, reflexed ; peduncles axillary, simple or branched, 1½-3 cm. long, rather hard, with linear bracts.

* Y.-Yēma ; M.=Myâku ; O.=Amami-Ōshima ; U.=Utchinā.

ARCHIPELAGO YÊMA, cult. sec. *Tashiro* in litt.

DISTRIB. Native of China; introduced into Japan.

MAGNOLIACEÆ.

Illicium, L.

I. Tashiroi, Maxim. in Mém. Biol. XII (1888) p. 716.

ARCHIPELAGO YÊMA : insula Irumuti in montanis (*Tashiro* ! April. 1887, flor.).

DISTRIB. Endemic.

A glabrous tree. Branches slender, cylindrical. Leaves alternate, coriaceous, oblong-elliptical, $9\frac{1}{2}$ - $13\frac{1}{2}$ cm. long, $2\frac{1}{2}$ - $3\frac{2}{3}$ cm. wide, shining above, margin entire, attenuate at the both ends; petiole 1 - $1\frac{1}{2}$ cm. long. Flowers terminal, about 1 cm. diam. Peduncle 1-flowered, cylindrical, slender, fleshy, $1\frac{1}{2}$ -2 cm. long. Petals rotundate-ovate or ovate-oblong, obtuse, ciliate.

In the Shitsumon Honzō, Gwaihen, IV, t. 24, there is an illustration of a species of *Illicium*.

Michelia, L.

M. compressa, Maxim. in Mém. Biol. VIII (1872) p. 506 (sub *Magnolia*); Franch. et Sav. Enum. Pl. Jap. I, p. 15; Keisuké Itō et Hika Kaku, Ic. et Descr. Pl. Hort. Koishikawa, I, t. 18; Henry, List Pl. Formos. p. 16.

INSULA UTCHINĀ (*Matsumura*, 1897, steril.) tractu Kundjan in montosis (*Tashiro*! April. 1887, flor).

DISTRIB. Japan and Formosa.

The leaves of a sterile branch collected by Matsumura are uncommonly large, obovate-oblong, $14\frac{1}{2}$ cm. long, 6 cm. wide, obtuse-mucronate or obtuse, rusty-tomentose below when young, but soon become glabrous. At first it seemed a distinct species, but after consideration we concluded it to be simply an abnormal form of *M. compressa*, (Maxim.).

Clypea corymbosa, Blume, Bijdr. p. 24.

INSULA MYĀKU (*Tashiro*! Julio 1887, steril.).

DISTRIB. Formosa, Hongkong, South China, Malaya, Himalaya and India.

Tashiro's specimen, considered by him a species of *Cocculus*, is sterile and too imperfect for determination. We, however, suggest that it may be *Pericampylus incanus*, Miq. It is a pubescent climber, with cordate, or subpeltate-cordate, leaves, which are velvety and villous on the veins below; veins are palmate, 7 or 9; petiole villous, as long as the lamina.

The figure represented in the Shitsumon Honzō, Naihen, II, t. 8, seems to be *Cocculus diversifolius*, Miq. (= *Menispermum diversifolius*, Prantl).

ARCHIPELAGO YÊMA (*Tashiro*! April. 1887, flor. et fructif.).

DISTRIB. Japan, Formosa and China.

This species differs from *C. pallida*, Pers. by having much smaller flowers, which, according to Sir J. D. Hooker, have a "small bag-like spur"; from *C. Raddeana*, Regel, by the linear, pendulous capsules, about 25 mm. long, and by very short pedicels, about $\frac{1}{10}$ the length of the capsules, while the latter species have oblong-linear or obovate-linear capsules, about 12 mm. long, and the pedicels about half the length of the capsules.

C. incisa, Pers. Syn. Pl. II, p. 269; DC. Syst. II, p. 121, et Prodr. I, p. 127; Sieb. et Zucc. Fl. Jap. Fam. Nat. in Abhandl. Akad. Muench. IV, pt. 2 (1845) p. 173; Miq. Prol. Fl. LÛTCHÛ (*Carpenter* sec. *Forbes* et *Hemsl.*).

INSULA I-hyâ-djima adjectu insula Utchinâ (*Tashiro* ! Martio 1887, flor. cum fructif. mat.).

DISTRIB. Europe, Siberia, temperate Asia, including Japan and Corea, to India and North Africa; introduced in America.

* **R. sativus**, L. Sp. Pl. ed. 1, p. 669; "Gærtn. Fruct. II, p. 300, t. 143"; Lam. Illustr. t. 566; Poir. Encycl. VI, p. 56; Willd. Sp. Pl. III, p. 560; Thunb. Fl. Jap. p. 263; Lour. Fl. Cochinch. p. 481; Mœench. Meth. p. 216; DC. Syst. II, p. 663, et Prodr. I, p. 228; "Reichb. Ic. Fl. Germ. II, t. 3"; Ledeb. Fl. I, p. 225; A. Gray, Man. Bot. N. Un. St. p. 75; Benth. Fl. Hongk. p. 17; Oliv. Fl. Trop. Afr. I, p. 73; Lowe, Man. Fl. Madeir. I, p. 40; Bunge, in Maxim. Primit. Fl. Amur. p. 47; Regel, Tent. Fl. Ussur. p. 23; Fr. Schmidt, Reis. im Amurl. p. 23; Miq. Prol. Fl. Jap. p. 8; Franch. et Sav. Enum. Pl. Jap. I, p. 39; Boiss. Fl. Orient. I, p. 400; Hook. f. et Anders. in Hook. f. Fl. Brit. Ind. I, p. 166; Forbes et Hemsl. Ind. Fl. Sin. I, p. 50; Maxim. Enum. Pl. Mongol. I, p. 77; Dur. et Schinz, Consp. Fl. Afr. I, pt. 2, p. 157.

LŪTCHŪ, cult.

NOM. LUTCH.: Daikon ex *Tashiro* in litt.

DISTRIB. Widely cultivated in Europe, Asia, Africa and America. Also commonly cultivated in Japan and China, and in the latter country, according to Forbes and Hemsley, it is often found in a wild state.

CAPPARIDÆ.

Polanisia, Rafin.

P. viscosa, DC. Prodr. I, p. 242; Seemann, Bot. Voy. 'Herald,' p. 363; Benth. Fl. Hongk. p. 18; Maxim. in Mél.

Biol. XII (1886) p. 419; Forbes et Hemsl. Ind. Fl. Sin. I, p. 50; Henry, List Pl. Formos. p. 18; Dur. et Schinz, Consp. Fl. Afr. I, pt. 2, p. 164.

P. icosandra, Wight et Arn. Prodr. Fl. Ind. Or. I, p. 22 (1854); Wight, Ic. Pl. Ind. Or. t. 2.

P. orthocarpa, Hochst. in "Flora (1841) p. 43."

Cleome icosandra, L. Sp. Pl. ed. 1, p. 672; Lour. Fl. Cochinch. p. 483.

C. viscosa, L. Sp. Pl. ed. 1, p. 672; Roxb. Fl. Ind. II, p. 128; Hook. f. et Thoms. in Hook. f. Fl. Brit. Ind. I, p. 170.

INSULA UTCHINÂ: in tractu Shimadjiri (*Tashiro*! Aug. 1887, flor. cum fruct.).

INSULA MYÂKU (*Tashiro*, 1880, flor. cum fructif. sec. *Maximowicz*).

ARCHIPELAGO YÊMA: insula Ishigatchi ad pagum Hōmamura (*Tashiro*! Aug. [Julio] 1887); insula Kuru-shima (*T. Itō*, n. 1369, 15 Aug. 1894, flor. et fructif.); insula Takidun (*T. Itō*, n. 1370, 15 Aug. 1894, flor. et fructif.); insula Sutubanari (*T. Itō*, n. 1482, 15 Aug. 1894, flor. et fructif.).

DISTRIB. Formosa, Hongkong, China, India, Madagascar, Africa, Australia and West Indies.

Cratæva, L.

C. religiosa, Forst. "Prodr. Fl. Ins. Austral, p. 35 (1786)"; DC. Prodr. I, p. 243; Oliv. Fl. Trop. Afr. I, p. 99; Hook. f. et Thoms. in Hook. f. Fl. Brit. Ind. I, p. 172; Forbes et Hemsl. I, p. 51; Henry, List Pl. Formos. p. 18; Dur. et Schinz, Consp. Fl. Afr. I, pt. 2, p. 177.

C. Adansonii, DC. Prodr. I, p. 243.

C. falcata, DC. Prodr. I, p. 243 ; Keisuke Itō et Hika Kaku, Ic. et Deser. Pl. Hort. Koishikawa, II, t. 10.

C. guineensis, Schum. et Thonn. "Beskr. Guin. Pl. I, p. 240."

C. lutea, DC. Prodr. I, p. 243.

C. magna, DC. Prodr. I, p. 243.

C. trifoliata, Roxb. Fl. Ind. II, p. 571.

Capparis falcata, Lour. Fl. Cochinch. p. 331.

C. magna, Lour. Fl. Cochinch. p. 331.

INSULA UTCHINÂ : ad oppidum Shui, culta (*Matsumura* ! 1897, folium).

ARCHIPELAGO YĒMA : in insula Yunakuni ad montem Irabu-daki (*S. Tanaka* ! n. 387, 13 Junio 1891, folium).

DISTRIB. Formosa (*Makino* ! *Ōwatari* !), China, India, Madagascar and tropical Africa.

We follow Forbes and Hemsley's delimitation of species to include here both *C. falcata*, DC. and *C. magna*, DC.

VIOLARIEÆ.

Viola, L.

V. Patrinii, Ging. in DC. Prodr. I, p. 293 (1824) ; Benth. Fl. Hongk. p. 20 ; Ledeb. Fl. Ross. I, p. 245 ; Turcz. Fl. Baic. Dah. I, p. 181 ; Maxim. Primit. Fl. Amur. p. 48, et in Mém. Biol. IX (1877) p. 721, et in Bull. Soc. Nat. Mosc. 1879, p. 5 ; Miq. Prol. Fl. Jap. p. 84 ; Regel, Tent. Fl. Ussur. p. 24, et Pl. Radd. I, pp. 214 et 230 ; Fr. Schmidt, Reis. im

Amurl. p. 34; Franch. et Sav. Enum. Pl. Jap. I, p. 41; Forbes et Hemsl. Ind. Fl. Sin. I, p. 53; Dur. et Schinz, Consp. Fl. Afr. I, pt. 2, p. 206.

INSULA UTCHINÂ : in Mutubu-madjiri ad montem Katsu-u-daki (*Tushiro*! Martio 1887, flor. cum fruct.).

DISTRIB. Siberia, Mandshuria, Japan, Hongkong, China, Himalaya, India and Afghanistan; naturalised in Mauritius. The Luchuan specimens belong to *var. typica*, Maxim.

V. japonica, Langsd. ex DC. Prodr. I, p. 295; Miq. Prol. Fl. Jap. p. 86; Maxim. in Mém. Biol. IX (1877) p. 724; Franch. et Sav. Enum. Pl. Jap. I, p. 42, et II, p. 287; Forbes et Hemsl. Ind. Fl. Sin. I, p. 53; Henry, List Pl. Formos. p. 18.

V. japonica var. pekinensis, Maxim. in Bull. Soc. Nat. Mosc. 1879, p. 4.

V. kamtschatica var. pekinensis, Regel, Pl. Radd. I, p. 230.

V. mysorensis, Wall. "Cat. n. 1446."

V. Patrinii, Hook. f. et Thoms. in Hook. f. Fl. Brit. Ind. I, p. 183, etc., pro parte (non Ging.).

V. prionantha, Miq. Prol. Fl. Jap. p. 84, pro parte (non Bunge).

V. prionantha var. latifolia, Miq. Prol. Fl. Jap. p. 85.

LÛTCHÛ, sec. *Maximowicz, Forbes et Hemsl.*

INSULA UTCHINÂ (*Matsumura*! 1897, flor.): in Nishi-baru-madjiri ad montem Binnu-taki (*Tîra*! Martio 1895, flor.); in Fanidji-madjiri ad montem Djinka (*Tushiro*! Febr. 1887, flor. et fructif.).

DISTRIB. Japan, Formosa (*Makino*!), China, Corea and India.

V. sylvestris, Kit. in "Schult. Œstr. Fl. I, p. 423."

Var. grypoceras, Maxim. in Mém. Biol. IX (1877) p. 743; Forbes et Hemsl. Ind. Fl. Sin. I, p. 55.

V. Grayi, Franch. et Sav. Enum. Pl. Jap. II, p. 288; Franch. Pl. David. I, p. 43.

V. grypoceras, A. Gray, in Perry Exped. p. 308; Franch. et Sav. Enum. Pl. Jap. I, p. 55, et II, p. 289.

V. Reichenbachiana, Franch. et Sav. Enum. Pl. Jap. I, p. 42, et II, p. 288 (non Jordan).

V. Riviviana, Franch. et Sav. Enum. Pl. Jap. I, p. 43 (non Reichb.).

V. sylvatica var. *imberbis*, A. Gray, Bot. Jap. in Mem. Am. Acad. n. s. VI (1859) p. 382.

INSULA UTCHINÂ : in tractu Kundjan (*Tashiro*! Martio 1887, flor.).

DISTRIB. (of species). Europe, Asia, Africa and America; *var. grypoceras*, Maxim. is found in Japan and China.

V. sp.

ARCHIPELAGO YÉMA : ad insulam Irumuti in montanis (*Tashiro*! Aug. [Julio] 1887, steril.).

Leaves triangular, obtuse, crenate-serrate, cuneate or deltoid at the base, petiole long.

This small acauline species of *Viola* is indeterminable, as the specimens collected by *Tashiro* being sterile.

BININEÆ.

Idesia, Maxim.

I. polycarpa, Maxim. in Mém. Biol. VI (1866) p. 19; Franch. et Sav. Enum. Pl. Jap. I, p. 45; Keisuké Itō et Hika Kaku, Ic. et Descr. Pl. Hort. Koishikawa, II, tt. 12 et 12 B; Bot. Mag. t. 6794; Henry, List Pl. Formos. p. 18; Matsumura, in Bot. Mag. Tokyo, XII (1898) p. 67.

INSULA UTCHINĀ: in tractu Kundjan (*Tashiro*! Martio 1877, steril.).

DISTRIB. Japan, Formosa and China.

It is interesting to note that the distribution of this monotypic genus is now known to extend to the mountainous districts of the Lûchû Islands, and also to Formosa (*vide* Kew Bulletin, 1896, p. 67) and Hupeh in China. Perhaps we might expect a discovery of this genus in the Himalayas. [T. Itō].

PITTOSPOREÆ.

Pittosporum, Banks.

P. Tobira, Ait. Hort. Kew. ed. 2, II, p. 27; DC. Prodr. I, p. 346; Bot. Mag. t. 1396; Miq. Prol. Fl. Jap. p. 272; Franch. et Sav. Enum. Pl. Jap. I, p. 44; Keisuké Itō et Hika Kaku, Ic. et Descr. Pl. Hort. Koishikawa, II, t. 14; Forbes et Hemsl. Ind. Fl. Sin. I, p. 58; Henry, List Pl. Formos. p. 18.

Euonymus Tobira, Thunb. Fl. Jap. p. 99.

LŪTCHŪ (*Wright*, sec. *Forbes* et *Hemsl.*).

INSULA UTCHINÁ : in Nâfa ad pagum Izunzatchimura (*Yamada* ! Aug. 1882, steril.).

DISTRIB. Japan, Formosa (*Makino* !), Corean Archipelago and China.

P. pauciflorum β (?), Hook. et Arn. et Bot. Beech. Voy. p. 259, pro parte, ex Forbes et Hemsl. Ind. Fl. Sin. I, p. 58 ; Henry, List Pl. Formos. p. 18.

P. lutchuense, T. Itō, in litt.

LŪTCHŪ (*Beechey*, sec. *Forbes* et *Hemsl.*, *H. Nakagawa* ! n. 56, fructif.).

INSULA AMAMI-ŌSHIMA (*Carpenter* sec. *Forbes* et *Hemsl.*) : inter Nazé et Yamatohama (*T. Itō*, n. 555, 16 Julio 1894, fructif.).

INSULA UTCHINÁ (*Matsumura* ! 1897, fruct. immat.) : ad oppidum Shui (*T. Itō*, n. 781, 26 Julio 1894, fructif. ?).

INSULA MYĀKU : circa Gushiku (*Tatitu* ! n. 1261, 25 Majo 1895, steril.).

NOM. LUTCH. : Tobiragi (O.) ex *T. Itō*.

POLYGALACEÆ.

Polygala, L.

P. sibirica, L. Sp. Pl. ed. 1, p. 702 ; DC. Prodr. I, p. 324 ; Ledeb. Fl. Ross. I, p. 269 ; A. W. Bennett, in Hook. f. Fl. Brit. Ind. I, p. 205, et in Journ. Bot. 1878, p. 277 ; Forbes et Hemsl. Ind. Fl. Sin. I, p. 61.

Var. japonica, T. Itō.

P. japonica, Houtt. "Syst. VIII, t. 62, f. 1"; DC. Prodr. I, p. 324; Benth. Fl. Hongk. p. 45 in adnot., et Fl. Austral. I, p. 139; Miq. Prol. Fl. Jap. p. 148; Franch. et Sav. Enum. Pl. Jap. I, p. 45; Baker et Moore, in Journ. Linn. Soc. XVII, p. 379; Maxim. Fl. As. Or. Fragm. in Bull. Soc. Nat. Mosc. 1879, p. 6, et Pl. Chin. Potanin. in Act. Hort. Petrop. XI, p. 64; Franch. Pl. David. I, p. 45, et "Pl. Delav. I, p. 78"; Henry, List Pl. Formos. p. 18; Shitsumon Honzō, Naihēn, II, t. 5.

LŪTCHŪ, sec. *Bentham*.

INSULA AMAMI-ŌSHIMA (*Tashiro*! Sept. 1887, flor. et fructif.): inter Yamatohama et Taken (*T. Itō*, n. 549, 16 Julio 1894, flor. cum fruct. immat.).

INSULA UTCHINĀ (*Tashiro*! Majo 1887, flor.): in Nishibara-madjiri ad montem Binnu-taki (*R. Tira*! 1895, flor.); inter Unna et Nagu (*T. Itō*, n. 1103, 25 Aug. 1894, deflor. cum fruct. immat.).

INSULA MYĀKU: prope Gushiku (*Tatitu*! 25 Majo 1895, flor.).

ARCHIPELAGO YĒMA (*Tashiro*! Aug. [Julio] 1887, flor.): in insula Ishigatchi ad montem Suri (*Aragatchi*! Martio 1895, flor.).

DISTRIB. (of species). Siberia, Mandshuria, Japan, Formosa, China, the Himalayas, India and Australia; *var. japonica* is confined to Japan, Formosa, China and Mandshuria.

Opinions of botanists vary again with regard to the limitation of this species. Forbes and Hemsley unite *P. sibirica*, L. and *P. japonica*, Houtt., while Maximowicz (Fl. Tangut. I, pp. 79-80) keeps them separate.

CARYOPHYLLLEÆ.

Dianthus, L.

* **D. sinensis**, L. Sp. Pl. ed. 1, p. 411 ; DC. Prodr. I, p. 359 ; Bot. Mag. t. 25 ; Rohrb. in Linnæa, XXXVI, p. 670 (varietates) ; Hook. et Arn. Bot. Beech. Voy. p. 259 (var. floribus subaggregatis) ; Forbes et Hemsl. Ind. Fl. Sin. I, p. 63 ; F. N. Williams, Enum. Sp. Dianth. p. 18, n. 159, et Monogr. Gen. *Dianthus*, in Journ. Linn. Soc. LÛTCHÛ (*Tashiro*! Febr. 1887, flor. et fructif.).

DISTRIB. Europe, Siberia, Japan, Formosa, Hongkong, China, the Himalayas, North Africa and North America.

Arenaria, L.

A. serpyllifolia, L. ex Hook. et Arn. Bot. Beech. Voy. p. 259.

LÛTCHÛ, ex *Hook.* et *Arn.*

In his recent revision of the genus *Arenaria* (in Journ. Linn. Soc. XXXIII, 1898, p. 367), Dr. F. N. Williams has clearly shown that *A. serpyllifolia*, L. and *S. leptoclados*, Guss. are two distinct species; of these, *S. leptoclados*, Guss. is the only one

hitherto known in Japan ; while *A. serpyllifolia*, L. is to be found in China. Although we have no specimens from Lûchû, we beg to suggest that Hooker and Arnott's plant might be identical with the Japanese species.

Sagina, L.

S. Linnæi, Presl, "Rel. Hænk. II, p. 14 (1835)"; Fenzl, in Ledeb. Fl. Ross. I, p. 339; Regel, Pl. Radd. I, p. 424; Fr. Schmidt, Reis. im Amurl. p. 117; Maxim. in Mém. Biol. LÛTCHÛ (*Wright fide Forbes et Hemsl.*).

INSULA AMAMI-ŌSHIMA: ad Miyamanto inter Yamato-hama et Taken (*T. Itō*, n. 602, 17 Julio 1894, fructif.).

NOM. LUTCH.: Yama Tchibatchi (U.) ex *T. Itō*.

DISTRIB. Japan and China.

C. sp. (an *C. euryoides*, Lindl.?).

LÛTCHÛ (*K. Hirasawa*! 1894, in Herb. Normal School, Kagoshima).

INSULA UTCHINĀ (*Matsumura*! 1897, steril.): in tractu Kundjan ad Unna (*Tashiro*! Martio 1887, steril.) nec non inter mont. Nagu-daki et Kushi (*S. Tanaka*! n. 160, 20 Majo 1891, fl. juven.); inter Nagu et Unna (*T. Itō*, n. 1108, 25 Aug. 1894, fr. mat.).

ARCHIPELAGO YĒMA ex *S. Tanaka* in litt.

General habits of *Eurya japonica*, Thunb. var. *Thunbergii*, Thwaites, but may at once be distinguished from that by its flowers and fruits. Leaves oblong-elliptical or obovate, $4\frac{1}{2}$ - $9\frac{1}{2}$ cm. long, 1 - $3\frac{1}{2}$ cm. wide., acuminate, tapering toward the base, crenate-serrate. Flower-buds $\frac{1}{2}$ cm. diam. subsessile, sepals unequal, rotundate, outside sericeo-pilose, naked within. Capsule leathery, rough, naked, pyriform, about 2 cm. long, apiculate. Seeds angular, smooth, shining, chestnut-coloured, $1\frac{1}{2}$ cm. long, $\frac{1}{2}$ cm. diam.

C. lutchuensis, T. Itô.

Arbusecula ramosa, ramulis alternis gracillimis flexuosis primum pilosis cinereis tum glabris. Folia alterna, brevissime petiolata, chartacea, elliptica, utrinque attenuata, obtiuscula minute crenato-serrata, concoloria, nitida, glaberrima, petiolis pilosis. Flores pseudoterminales vel axillares, subsessiles, parvuli, erecta (?), solitarii rarius in paribus; sepala circa 5, imbricata glabra rotundata vel ovata, acuta, obtusa vel mucronata; petala inæqualia, glabra, ovata vel rotundata, apice emarginato vel obcordato sæpe rotundato; stamina numerosa petalis breviora, filamentis planis, glabris linearibus, antheris globosis vel oblongo-globosis; stylus filiformis subglaber, trifidus, exertus. Capsula globosa apiculata lævis, 1-3-spermia. Semina globosa vel ovoidea sæpe semiovoidea, glabra, brunnea.

INSULA UTCHINÂ (*Matsumura*! 1897, deflor.): in montanis ad Kundjan-madjiri (*Tashiro*! Majo 1887, flor.); ad montem Nagu-daki in Nagu-madjiri (*S. Tanaka*! n. 161, 20 Majo 1891, *T. Itô*, n. 1110, 24 Aug. 1894, fruct. mat.).

ARCHIPELAGO YËMA in montanis (*Tashiro*! Julio 1887, flor.).

Folia 20-25 mm. longa, 10-15 mm. lata, petiolo 1-2 mm. longo. Flores vix 25 mm. diametro. Sepala 2-3 mm. longa. Petala exteriora 5 mm. longa et lata, interiora circa 7-10 mm. longa, 6-8 mm. lata. Filamentum staminis circa 5 mm. Stylus 10 mm. Capsula 10-13 mm. longa. Semina 8-9 mm. longa, 5-8 mm. lata.

Closely allied to *C. assimilis*, Champ. and to *C. gracilis*, Hemsl., but, it differs from both by its naked filaments and style, as well as by the smaller leaves.

DISTRIB. Endemic.

C. sp. (an *C. drupifera*, Lour?).

INSULA UTCHINÂ (*Matsumura*! 1897, fruct. immat.): in Hanidji-madjiri monte Djinka (*Tashiro*! Martio [April.] 1887, steril.); in tractu Kundjan in montibus Unna-daki (*T. Itō*, n. 1054, 23 Aug. 1894, frf.) et Nagu-daki (*T. Itō* n. 1109 B, 24 Aug. 1894, frf.).

The branches of this plant are slender and cylindrical, and the leaves elliptical, coriaceous, glabrous, minutely punctate on both surfaces, shining above, 3-9 cm. long, $1\frac{1}{2}$ -3 cm. wide, acute or subacuminate, attenuate at the base, minutely crenate-serrate, entire toward the base, veins often obscure, except the midrib; at the base of young branches, there is usually a pair of spatulate or oblanceolate scales, which are sericeous outside.

C. sp.?

LÛTCHÛ (*Tashiro*! steril.)

Leaves very small, $1\frac{1}{2}$ or 2 cm. long, $\frac{3}{4}$ -1 cm. wide, smooth, shining, elliptical-lanceolate, obtuse or acute, crenate-serrulate. Tashiro's specimen is too imperfect for further determination.

T. trilocularis, Roxb. Fl. Ind. II, p. 462.

INSULA AMAMI-ŌSHIMA (*Tashiro* ! Sept. 1887, steril.).

INSULA UTCHINÂ (*Matsumura* ! 1897, fl.).

INSULA MYÂKU (*Tashiro* ! Aug. 1887, fl.).

ARCHIPELAGO YÊMA (*Tashiro* ! Aug. 1887, steril.): insula Irumuti ad pagum Sunai-mura (*S. Tanaka* ! n. 330, 15 et 12 Junio 1891, planta minor) ; insulis Kurushima et Hatiruma (ex *Tashiro*) ; insula Ishigatchi ad pagum Shikamura (*Kuroiwa* ex *Makino*).

DISTRIB. Tropical and subtropical Asia, including

Formosa (*Makino*!), south-eastern China and India; also in tropical Africa, America and the Malay Islands.

T. procumbens, Forst. "Prodr. Fl. Ins. Austral. p. 35"; DC. Prodr. I, p. 508; Hook. et Arn. Bot. Beech. Voy. p. 60; Hemsl. in Journ. Bot. 1890, p. 2 (non Benth. Fl. Austral. I, p. 273, nec auct. alior., saltem pro maxima parte).

T. crassifolia, Solander, "Prim. Fl. Pacif. p. 250," et in "Parkins. Drawings of Tahit. Pl. t. 51, ined."; Seemann, Fl. Vit. p. 26.

T. Fabreana, Gaud. "Bot. Voy. Freyc. p. 478, t. 102," fide Hemsl. l.c.

ARCHIPELAGO YĒMA: insula Hatiruma (*Tashiro*! Julio 1887, frf.).

DISTRIB. Malay Archipelago, Western Polynesia, Fritzroy Island, the Seychelles, Diego Garcia and the Keeling Islands.

This is an interesting discovery. The whole plant densely villous, the stem being procumbent, with long-petioled rotundate or ovate obtusely 1- or tri-lobed crenate or crenate-dentate leaves, nearly naked above, but densely pubescent and grayish below. Fruits globose, $\frac{1}{3}$ - $\frac{1}{2}$ inch diam., with many densely villous prickles, which are distinctly dilated at the base.

Tashiro's specimen is closely allied to *T. semitriloba*, L., but can be distinguished by its stem being softly pubescent and never hispidulous, by its fruits provided with many long prickles, which are dilated at the base, as well as densely villous and never glabrous.

T. annua, L. Mant. p. 73; DC. Prodr. I, p. 507; Miq.

Fl. Ind. Bat. I, pt. 2, p. 196; Mast. in Hook. f. Fl. Brit. Ind. I, p. 396; Bot. Mag. t. 2296.

T. indica, Lamk. Encycl. III, p. 420? ex DC. l.c.

INSULA AMAMI-ŌSHIMA (*Tashiro*! Sept. 1887, fl. et frf.).

DISTRIB. Asia, including Japan and India; also in the Malay Islands and Tropical Africa.

Corchorus, L.

C. acutangulus, Lamk. Encyl. II, p. 104; DC. Prodr. I, p. 505; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 73; Wight, l.c. Pl. Ind. Or. t. 739; Benth. Fl. Hongk. p. 40, et Fl. Austral. I, p. 277; Maxim. in Mél. Biol. XII (1886) p. 428; Griseb. Fl. Brit. W. Ind. Isl. p. 97; Mast. in Hook. f. Fl. Brit. Ind. I, p. 398; Forbes et Hemsl. Ind. Fl. Sin. I, p. 93; Henry, List Pl. Formos. p. 23.

C. fuscus, Roxb. "Hort. Beng. p. 42," et Fl. Ind. II, p. 582.

LŪTCHŪ (*H. Nakagawa*!).

INSULA AMAMI-ŌSHIMA (*Tashiro*! Sept. 1887, fl. et frf.).

INSULA UTCHINĀ: tractu Nakugan (*Tashiro*! Junio 1887, fl. et frf.).

INSULA MYĀKU (*Tashiro*! Julio 1887, fl. et frf., *T. Itō*, n. 1154, 9 Aug. 1894, fl.).

ARCHIPELAGO YĒMA (*Tashiro*! Aug. 1887, fl.): insula Kuru-shima (ex *Tashiro*).

DISTRIB. Tropical and subtropical Asia, including Formosa (*Makino*!), Hongkong and India; also in Tropical Africa, Australia and the West Indies.

Elæocarpus, L.*

E. decipiens, Hemsl. in Forbes et Hemsl. Ind. Fl. Sin. I, p. 94; Henry, List Pl. Formos. p. 24.

E. photiniæfolius, Sieb. et Zucc. Fl. Jap. Fam. Nat. in Abhandl. Akad. Muench. IV, pt. 2 (1845) p. 164; Miq. Prol. Fl. Jap. p. 205; Franch. et Sav. Enum. Pl. Jap. I, p. 67 (non Hook et Arn.).

LŪTCHŪ (*Wright* fide *Forbes* et *Hemsl.*).

INSULA UTCHINĀ: ad oppidum Shui (*T. Itō*, n. 785, 26 Julio 1894, fl.).

DISTRIB. Japan, Formosa and China.

E. japonicus, Sieb. et Zucc. Fl. Jap. Fam. Nat. in Abhandl. Akad. Muench. IV, pt. 2 (1845) p. 165; Miq. Prol. Fl. Jap. p. 205; Franch. et Sav. Enum. Pl. Jap. I, p. 67; Maxim. in Engler, Bot. Jahrb. VI (1885) p. 61; Forbes et Hemsl. Ind. Fl. Sin. I, p. 95.

LŪTCHŪ (*Wright* fide *Forbes* et *Hemsl.*).

* Observ. An allied genus *ECHINOCARPUS*, Bl., though represented by two species in China and by one in Formosa, has never been discovered within our limits. As there seems, however, to occur a little confusion in the nomenclature of the Chinese species, published some years ago by Mr. Hemsley, I may venture to make the following suggestion:—

1. **Echinocarpus sinensis**, Hance, in Journ. Bot. 1884, p. 108.

Hab. in China: Kwangtung, Lofaushan (*Fuber* fide *Hance*).

2. **E. Hemsleyanus**, T. Itō.

E. sinensis, Hemsl. in Annals of Bot. IX (1895) p. 147 (non *Hance*).

Hab. in China: Hupeh (*A. Henry* fide *Hemsl.*).

Schumann (in Engler and Prantl's Natürlich. Pflanzenfam. III, 6, p. 5), however, includes this genus into *Sloanea*, L. [T. Itō].

INSULA AMAMI-ŌSHIMA (*Doederlein* fide *Maximowicz*) : inter Nishinakama et Nazé (*T. Itō*, n. 718, 20 Julio 1894, frf.).

INSULA UTCHINÁ (*Tashiro*! Majo 1887, fl. et fruct. immat., *Matsumura*! 1897, deflor.) : in tractu Kundjan monte Unna-daki (*T. Itō*, n. 1086, 23 Aug. 1894, frf.).

ARCHIPELAGO YĒMA (*Tashiro*! Julio 1887, frf.) : in insula Ishigatchi monte Suri (*Aragatchi*! 21 Martio 1895, flor.).

NOM. LUTCH.: Susadjin (Y.) ex *Aragatchi* in litt.

DISTRIB. Japan.

MALPIGHIACEÆ.

Tristellateia, Thouars.

T. australasica, A. Rich. "Sert. Astrol. p. 38, t. 15"; Benth. Fl. Austral. I, p. 286; Hook. f. Fl. Brit. Ind. I, p. 418; Matsumura, in Bot. Mag. Tōkyō, XII (1898) p. 2; Henry, List Pl. Formos. p. 24.

Platynema laurifolium, Wight et Arn. in Edin. New Phil. Journ. 1833, p. 179, et Prodr. Fl. Pen. Ind. Or. I, p. 107.

INSULA UTCHINÁ : ad marginem lacus Kezazi (*Matsumura*! Majo 1897, fl.).

DISTRIB. Singapore, eastwards to New Ireland.

GERANIACEÆ.

Oxalis, L.

O. corniculata, L. Sp. Pl. ed. 1, p. 435; Thunb. Fl. Jap.

p. 187 ; Lour. Fl. Cochinch. p. 285 ; Hook. et Arn. Bot. Beech. Voy. p. 261 ; DC. Prodr. I, p. 692 ; Benth. Fl. Hongk. p. 56, et Fl. Austral. I, p. 301 ; Roxb. Fl. Ind. II, p. 457 ; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 142 ; Wight, Ic. Pl. Ind. Or. t. 18 ; Miq. Prol. Fl. Jap. p. 271 ; Franch. et Sav. Enum. Pl. Jap. I, p. 69 ; Forbes et Hemsl. Ind. Fl. Sin. I, p. 99 ; Franch. Pl. David. I, p. 65 ; Hillebrand, Fl. Hawaii. Isl. p. 59 ; Henry, List Pl. Formos. p. 24.

LÛTCHÛ (*H. Nakagawa!* fructif.).

INSULA UTCHINÂ (*Tashiro!* Majo 1887, fl. et frf.): ad Nâfa (*T. Itō*, n. 844, 4 Aug. 1894, flor.); inter Nâfa et Tchatan (*T. Itō*, n. 953, 22 Aug. 1894, fructif.); ad oppidum Shui (*Matsumura!* 1897, fl.).

INSULA MYÂKU (*T. Itō*, n. 1155, 17 Aug. 1894, frf.). Insula Irabu proxime insula Myâku (*T. Itō*, n. 1208, 17 Aug. 1894, flor. et fructif.).

ARCHIPELAGO YÊMA : insula Kuru-shima (ex *Tashiro*, *T. Itō*, n. 1372, 15 Aug. 1894, flor. et fructif.).

NOMIN. LUTCH.: Târâgwâ-gusa (U.), Nyâtsuku (M.) ex *T. Itō*.

DISTRIB. Cosmopolitan in warm countries.

* **O. violacea**, L. (?) Sp. Pl. ed. 1, p. 433 ; Willd. Sp. Pl. II, p. 786 ; “Thunb. Diss. Oxal. p. 12” ; “Jacq. Oxal. p. 93, t. 56” ; DC. Prodr. I, p. 695 ; Bot. Mag. t. 2215 ; Lamk. Encycl. IV, p. 686 ; A. Gray, Man. Bot. N. U. St. p. 109.

LÛTCHÛ, cult. (*S. Tanaka!* 1891, steril. sub “introduced from China about 20 years ago”).

NOM. LUTCH.: Yawata, ex *S. Tanaka* in litt.

DISTRIB. America.

Mr. S. Tanaka kindly sent me a specimen, which, being unfortunately sterile, is too imperfect for specific determination in this great genus. [T. Itô].

Impatiens, L.

* **I. Balsamina**, Linn. Sp. Pl. ed. 1, p. 938; Thunb. Fl. Jap. p. 327; Lour. Fl. Cochinch. p. 312; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 135; Hook. et Arn. Bot. Beech. Voy. p. 260; Hook. f. Fl. Brit. Ind. I, p. 453; Miq. Prol. Fl. Jap. p. 8; Franch. et Sav. Enum. Pl. Jap. I, p. 70; Forbes et Hemsl. Ind. Fl. Sin. I, p. 100.

Balsamina hortensis, Desf. in "Dict. Sc. Nat. III, p. 485"; DC. Prodr. I, p. 685.

LÛTCHÛ (fide *Hook. et Arn.*). Cult.

DISTRIB. Throughout tropical and subtropical India, Ceylon, and the Malay Islands, often only as an escape from cultivation, as it is probably in China (*conf.* Forbes et Hemsl. l.c.).

I observed this plant in Amami-Ōshima and also in the Yêma Archipelago. [T. Itô].

RUTACEÆ.

Bœninghausenia, Reichb.

INSULA UTCHINĀ: ad Kundjan-madjiri in montosis
(*Tashiro* ! Febr. 1887, steril. sub nom. “ *Euonymus japonicus*,
Th. var. *radicans*, Miq ?”).

DISTRIB. China and the Himalayas.

***E. lutchuensis*, T. Itō.**

Arbuscula tota glabra, ramulis gracilibus subquadrangulatis. Folia chartacea, breviter petiolata, lanceolata vel elliptico-lanceolata, crenato-serrata, utrinque viridia vel glaucescenti-viridia, venis primariis utrinque prominentibus, venulis sæpe obscuris. Cymæ subterminales rarius axillares, 2-3-floræ, pedunculis elongatis filiformibus folio brevioribus, pedicellis erectis ad apicem crassis. Bractæ sub articulatione pedicellorum insertæ minutæ subulatæ fugaces. Flores tetrameri, mediocria, viridio-rufescentes, laciniae calycis depresse semi-orbiculatæ minutissime erosæ; petala sessilia calyce duplo longiora patentia orbicularia; stamina et stylus e disco vix emersa. Capsula lævis subcornuta 4-partita, quorum 1-2 vel 3 partes rudimentalia et diminuta; valvæ dehiscentes ovatae; arillus ochracea totum semen obtegens. Semen oblongo-ellipsoidea, testa tenui lævi.

INSULA UTCHINĀ (*Matsumura* ! 1897, flor.).

ARCHIPELAGO YĒMA: in montosis (*Tashiro* ! Julio 1887, flor. juvenil.): insula Ishigatchi (*T. Itō*, n. 1274, 11 Julio 1894, fructif.), ad montem Suri (*Aragatchi* ! n. 1346, 21

Martio 1895, flor.) ; insula Trumuti ad pagum Sunai-mura (*S. Tanaka* ! n. 332, 15 et 19 Junio 1891, steril.).

NOMIN. LUTCH.: Pashin-gara-kii (Y.) ex *Aragatchi* ; Gi-hagi (Y.) ex *S. Tanaka* in schedula.

Folia 3-7 cm. longa, $\frac{3}{4}$ -3 cm. lata, petiolo 2-5 mm. longo. Pedunculi $1\frac{1}{2}$ -3 cm. longi, pedicellis 4-5 mm. longis. Flores diametro 4-5 mm. Calyx diam. $3\frac{1}{2}$ mm. Petala 2 mm. Corna capsulæ atropurpurea, 5-7 mm. longa, 3-5 mm. lata.

Allied to *E. gracillimus*, Hemsl., but can be distinguished from that species by its habits being not procumbent, and also by the 4-merous flowers ; from *E. Przewalskii*, Maxim. by the larger, chartaceous leaves, by the peduncles being shorter than the leaves, and by the form of the capsules ; from *E. cornuta*, Hemsl. by the broader leaves, glabrous petals, and by the smaller capsules ; and from *E. alata*, Thunb. by the branches being more slender and flexible and never winged, and also by the capsules.

LŪTCHŪ (*Wright*, fruct. immat. sec. *Maximowicz*).

INSULA UTCHINĀ (*Matsumura* ! Majo 1897, fruct. immat.): circa Tumi-gushiku, cult. (*T. Itō*, n. 904, 25 Julio 1894, frf.).

The forms of the leaves in Matsumura's specimens are elliptical or lanceolate-elliptical, with long acuminate mucronate apex, while in Itō's specimens they are oval or obovate-oval, with obtusely cuspidate or acuminate apex. As our materials are not sufficient to determine the limitation of species in this difficult genus, we have simply followed Maximowicz. Lawson (in Hook. f. Fl. Brit. Ind. I, p. 639) unites many forms under the name *R. dahurica*, while Forbes et Hemsley left Wright's specimens from the Luchuan Islands undermined. Further investigation is necessary to define the limits of the Eastern Asiatic species of this genus.

LEGUMINOSÆ.*

determinavit

J. Matsumura.

Thermopsis chinensis, Benth. S. Moore in Journ. Bot. 1878, p. 131; Hance in Journ. Bot. 1882, p. 4; Hemsl. in Journ. Linn. Soc. XXIII, p. 150, pro parte.

Planta viva foetida. Caulis teres glaber, ramis arcuato-patentibus; foliola supra glabra, subtus adpresse pilosa, stipulis petiolo multo brevioribus; calyx fructifer persistens vel deciduus sub lente adpresse pilosus; legumina matura linearia, coriacea, plana, acuta brevi stipitata, erecta vel subarcuata, adpresse pilosa, 15-sperma; semina ovoidea brunnea opaca.

Petoli 20-25 mm. longi, pilosi. Foliola terminalia supp. maxima 45 mm. longa, 15 mm. lata; stipulae 20 mm. longae, vix 5 mm. latae. Calyx fructifer 8 mm. longus. Pedicelli ad 10 mm. longi. Legumina 60-85 mm. longa, 8 mm. lata; stipites 5-8 mm. longi.

Hab. Liukiu centrali: insula Okinawa, arenosis maritimis prope Kimm legerunt Tashiro et ipse; insula Ie-shima legit Tashiro; insula Kumeshima (H. Kuroiwa). Fr. Martio-Maio.

OBS. I. Species a cl. Hemsley l.c. cum *T. fabacea*, DC. conjuncta ex ea satis differt foliis stipulisque angustioribus, leguminibus subcoriaceis, seminibus ovoideis brunneis opacis.

* In hoc indice adnumerantur stirpes Formosanæ, quae a botanicis T. Makino, K. Miyake, C. Owatari, Y. Tashiro, collectoribus S. Hiraoka, Dre. Honda, Y. Honda, S. Kawai, H. Kawakami, T. Niinami, Y. Satake, M. Ueno, S. Yokoyama, aliisque nuper in variis locis ejusdem insulae lectae sunt.

OBS. II. *Thermopsis fabacea*, DC. Prodr. II, p. 99; Ledeb. Fl. Ross. I, p. 511; Maxim. Prim. Fl. Amur. p. 78; Miq. Prol. p. 42; Fr. Schm. Reis. in Amur. p. 123; Inuma, Soomokuzusetsu XIII. t. 38. Hab. in Japonia: ins. Yezo: Zenibako (Y. Tokubuchi), Yubutsu (K. Miyabe), Urup, ins. Kurile (K. Uchida), Hakodate (R. Yatabe). In Hortis Tōkyōensibus saepissime culta. Legumina submembranacea subreticulata; semina plano-subrotunda flavida nitida.

Crotalaria ferruginea, Grah; Baker in Hook. f. Fl. Brit. Ind. II, p. 68; Hance in Journ. Bot. 1882, p. 4; Hemsl. in Journ. Linn. Soc. XXIII, p. 151; G. King in Journ. Asiat. Soc. Beng. LXVI (1897) p. 37; Trimen, Handbook Fl. Ceyl. II, 10; C. pilosissima, Miq. Fl. Ind. Bat. I, p. 327. *C. rufescens*, Franchet, Pl. David. p. 79 ex Hemsl. l.c.

Folia in sicco nigrescentia, elliptica vel ovato-elliptica vel oblonga, obtusa, supra punctata pilosa, stipulis ovatis acutis patentibus. Legumina 40 mm. longa, 15 mm. lata, oblonga obtusa, in sicco nigra glabra. Semina nigrescentia nitida.

Hab. in Formosa boreali: ad Sinteck (T. Makino), ad Pachina (Niinami, et Ueno no. 6, 40); Formosa orientali: in campis Tsuibi dictis jurisdictionis Taitoo legit Y. Tashiro. Fl. et fr. Septembri-Novembri.

Crotalaria linifolia, L. f. DC. Prodr. II, p. 128; Benth. Fl. Austr. II, p. 180; Miq. Fl. Ind. Bat. I, p. 342; Baker in Hook. f. Fl. Brit. Ind. II, p. 72; Hemsl. in Journ. Linn. Soc. XXIII, p. 151; Trimen, Fl. Ceyl. II, p. 13; Makino in Tōkyō Bot. Mag. IX. p. 61; Henry in Trans. Asiat. Soc. Jap. XXIV. Suppl. p. 30.

Annua. Caulis bipedalis adpresse sericeus; folia brevissime petiolata, lineari-oblonga, obtusa, mucronata supra punctata parce pilosa, subtus adpresse sericea, stipulis nullis. Racemi 150 mm. longi. Calycis lobi postici connati, bracteis persistentibus subulatis, pedicellis brevioribus, reflexis vel patentibus. Legumina subglobosa, nigrescentia, glabra.

HAB. in Formosa orientali: jurisdictione Taitoo ad Tsuibi legit Y. Tashiro. Fl. et fr. Septembri.

Crotalaria formosana, Matsumura sp. nov.

Annua, exsiccatione viridescens. Caulis teres, basi ramosus, adpresse villosus. Folia simplicia, brevissime petiolata, oblonga vel oblongolinearia obtusa, emarginata vel mucronulata, supra punctulata, pilis longis adpresse pilosa, subtus adpresse sericea, stipulis minutissimis glanduliformibus instructa. Racemi longi, terminales, 4-26-flori, secundi, bracteis minutis subulatis reflexis vel patulis, pedicellis multoties brevioribus. Calyx sericeus flavescentis, segmentis posticis $\frac{1}{2}$ partitis, quam antica latioribus obovato-ellipticis obtusis, anticis lanceolatis; corolla flava calyce brevior vel aequilonga; vexillum late cuneatum striatum brevissime unguiculatum, subretusum emarginatum extus pubescens; alæ vexillo breviores ellipticae vel oblongo-ellipticae brevi unguiculatae; carinae ovatae rostratae contortae. Ovarium lineare recurvatum utrinque attenuatum; stylus inflexus apicem versus barbatus. Legumen oblongum, glabrum, pallidum, paulo exsertum vel fere inclusum, 10-spermum.

Pedicelli 3 mm. longi. Calyx 8 mm. longus. Ovarium 4 mm. longum; stylus 4 mm. longus. Legumen 10 mm. longum, 4 mm. latum.

Species *C. tectae*, Roth. affinis, differt stipulis minutis instructis, corollis extus pubescentibus.

Hab. in Formosa australi: in campis prope Tailan legit Y. Tashiro.

Crotalaria sessilifora, L. DC. Prodr. II, p. 129; Miq. Fl. Ind. Bat. I, p. 338; Baker in Hook. f. Fl. Brit. Ind. II, p. 73; Hemsl. in Journ. Linn. Soc. XXIII, p. 152; G. King in Journ. Asiat. Soc. Beng. LXVI, p. 36; Henry in Trans. Asiat. Soc. Jap. XXIV. Suppl. p. 30; *C. eriantha*, Sieb. et Zucc. in Abhandl. Akad. Wiss. IV, p. 121; Miq. Prol. p. 230; *C. Oldhami*, Miq. Prol. p. 230; *C. brevipes*, Champ. Benth. Fl. Hongk. p. 74.

Hab. in Formosa boreali: ad Sinteck legit T. Makino; ad Byolitsu legit Honda (no. 37); in Formosa orientali ad Tsuibi jurisdictionis Taitoo legit Y. Tashiro.

Crotalaria retusa, L.; DC. Prodr. II, p. 125; Roxb. Fl. Ind. III, p. 272; Miq. Fl. Ind. Bat. I, p. 330; Hook. et Arn. Bot. Beech, Voy. p. 180; Bot. Mag. t. 2561; Benth Fl. LXVI, p. 38; *Lupinus cochinchinensis*, Lour. Fl. Cochinch. II, p. 352; DC. Prodr. II, p. 410.

Specimina nostra palmaria, ramosa. Folia brevissime petiolata, obovata vel obovato-oblonga, cuneata, emarginata, mucronulata, supra glabra punctulata, subtus pilis brevissimis adpresse strigosa, 23-36 mm. longa, 9-18 mm. lata. Racemi 2-7-flori, bracteis subulatis reflexis. Calycis superiore labium bifidum, lobis ovatis acutis; inferiore tridentatum; corolla lutea; vexillum

ad venas strigosum. Legumina oblonga, glabra, turgida, ad 35 mm. longa, 11 mm. lata, 13-sperma.

Hab. in Formosa australi: in campis jurisdictionis Hong-soang legit Y. Tashiro.

Crotalaria verrucosa, L. DC. Prodr. II, p. 125; Bot. Mag. t. 3034; Wight, Ic. t. 200; Miq. Fl. Ind. Bat. I, p. 331; Baker in Hook. f. Fl. Brit. Ind. II, p. 77; Hemsl. in Journ. Linn. Soc. XXIII, p. 153; Trimen, Fl. Ceyl. II, p. 15; G. King in Journ. Asiat. Soc. Beng. LXVI, p. 39; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 30.

Hab. in Formosa australi: Hong-soang et Amping (H. Kawakami), Lengaliau, Shing-kang-tzoon, et Shihoon (C. Ōwatari); Tonsheekac, jurisdictionis Taichū (Y. Satake); Formosa orientali, jurisdictione Taitoo (Y. Tashiro, no. 8.) Fl. et fr. Decembri-Februari.

Pipactsoo (nom. indigen. ex Satake).

Crotalaria trifoliastrum, Willd. Roxb. Fl. Ind. III, 277; Wight Ic. t. 421; Miq. Fl. Ind. Bat. I, p. 344; Baker in Hook. f. Fl. Brit. Ind. II, p. 82; *C. medicaginea*, DC. Prodr. II, p. 133; *C. stricta*, Roth. DC. Prodr. II, p. 133.

Perennis. Caulis 1-2 pedalis pubescens. Foliola obovato-cuneata, retusa, subemarginata, mucronulata, supra glabra, subtus adpresse sericea, 8-12 mm. longa, 5-9 mm. lata, petiolis foliolis aequilongis. Racemi fructiferi 20-40 mm. longi, 4-12-flori. Calyx 3 mm. longus, segmentis lanceolatis, longitudine tubum superantibus. Legumina vix 5 mm. longa, pubescentia; semina nigra.

Hab. in Formosa australi-orientali : in campis Pinang legit Y. Tashiro (no. 13.).

Crotalaria Saltiana, Andr.; G. King in Journ. Asiat. Soc. Beng. LXVI. p. 41; D. Prain in Journ. Asiat. Soc. Beng. LXVI. p. 353; *C. striata*, DC. Prodr. II, p. 131; Bot. Mag. t. 3200; Miq. Fl. Ind. Bat. I, p. 346; Baker in Hook. f. Fl. Brit. Ind. II, p. 84; Hemsl. in Journ. Linn. Soc. XXIII, p. 153; Trimen, Fl. Ceyl. II, p. 18; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 30; Iinuma, Soomoku-Zusetsu, XIII, t. 35.

Hab. in Formosa australi : campis prope Nisoogyō jurisdictionis Tailan legit Y. Tashiro (no. 49). Fl. Aprili.

Melilotus parviflora, Desf.; DC. Prodr. II, p. 187; Hook. et Arn. Beech. Voy. p. 262; Ledeb. Fl. Ross. I, p. 538; Baker in Hook. f. Fl. Brit. Ind. II, p. 89; Franchet, Pl. David, p. 81; Hemsl. Journ. Linn. Soc. XXIII, p. 155.

Calyx florifer vix 2 mm., fructifer vix 3 mm. altus. Calycis dentes lanceolati nec deltoidei. Stipulæ lineari-lanceolatae basi non dilatatae, integerrimæ, 8 mm. longæ. Legumina glabra, reticulata.

Hab. insula Ōshima : ad pagum Naze legit T. Itō (no. 499, 558); insula Liukiu : Naha (Y. Tashiro), Yontanzan (ipse).

Medicago lupulina, L.; DC. Prodr. II, p. 172; Ledeb. Fl. Ross. I, p. 527; Baker in Hook. f. Fl. Brit. Ind. II, p. 90; Benth. Fl. Hongk. p. 75; Hemsl. in Journ. Linn. Soc. XXIII, p. 154.

Hab. Liukiu : insulis Miyako et Okinawa legit Y. Tashiro.

Lotus australis, Andr.; DC. Prodr. II, p. 212; Benth.

Fl. Austral, II, p. 188; Bot. Mag. t. 1365; Makino in Tōkyō Bot. Mag. X, p. 57.

Flores albi. Legumina 25-50 mm. longa, 4 mm. lata, glabra.

Hab. Liukiu: insula Okinawa in littore marino prope pagum Kimm (Y. Tashiro et ipse); insula Ōshima, in pago Yuwan (Y. Tashiro); insula Kumeshima (H. Kuroiwa).

Var. **Liukiuensis**, Matsumura.

Suffrutescens erecta ultra 4-pedalis ramosa, ramis lignosis, ramulis juvenilibus adpresse sericeis demum glabrescentibus, teretibus vel subangulatis. Folia petiolata imparipinnata interdum abortu pari-pinnata: foliola plerumque 13, ovato-oblonga vel oblonga rarius elliptica, mucronata supra viridia, subtus glauca pilis adpressis parce vestita. Racemi erecti, foliis multo breviores, pluriflori, haud densi, pedicellis patentibus. Calyx subcampanulatus inaequalis; calycis dentes tubo breviores, deltoidei, acuti, fusco-pubescentes. Corolla calyce quarter longiora; vexillum elliptico-rotundatum, extus pubescens, intus glabrum; alae obovato-oblongae obtusae vexillo breviores; carinae obovato-oblongae subacutae, extus pubescentes acute auriculatae. Ovarium lineare, sessile. Legumina matura linearia, adsendentia, turgida, juniora plana, adpresse pilosula, brevi rostrata, 5-10-sperma.

Folia 10-14 cm. longa, petiolis $1\frac{1}{2}$ -2 cm. longis. Racemi 4-6 cm. longi. Flores ca. 1 cm. longi. Pedicelli fructiferi 3 mm. longi. Vexillum 1 cm. longum, 3 mm. latum. Alae 6-7 mm. longae, $2\frac{1}{2}$ mm. latae. Carinae 7-8 mm. longae, 6 mm. latae. Stamina 9 mm. longa. Ovarium 9-10 mm. longum. Legumina $2\frac{1}{2}$ -4 cm. longa, 4-5 mm. lata.

Hab. in Liukiu: insula Iriomote legit S. Tanaka (no. 338) anno 1890; insula Kubama, Yaeyama legit T. Itō (no. 1375, 1386) anno 1894.

Mucuna macrocarpa, Wall.?

Folia et legumina desunt. Caulis supp. 2-½ cm. diametro, Racemi penduli, 11 cm. longi, pubescentes, in ramis vetustioribus fasciculati; pedicelli 1½ cm. longi. Calyx 22 mm. altus. Vexillum 4 cm. longum, 5 cm. latum, margine tomentosum. Alæ 5½ cm. longæ, 2 cm. latæ, obtusæ, margine tomentosæ. Carina 6½ cm. longa, 1½ cm. lata, lineari-oblonga, acuta. Stamina 6½ cm. longa. Ovarium sessile, lineare, pubescens, multiovulatum.

Hab. in Liukiu (H. Kuroiwa).

Mucuna sp.

Exemplum incompletum tantum prostat. Folia terminalia elliptica vel elliptico-oblonga acuta, basi subrotundata utrinque glabra; lateralia majora oblique ovata. Flores in sicco nigri. Calyx vexillumque exempl. nos. desunt. Alæ anguste oblongæ carinis aequilongæ; carina 30 mm. longa, 6

mm. lata, acuta subincurva brevi apiculata, basi auriculata. Stamina diadelpha.

Hab. in Liukiu : insula Ishigaki legit S. Tanaka anno 1891 : insula Iheya (H. Kuroiwa). Mense Julio, fl.

Mucuna (Zoophthalmum, Carpogon)* **ferruginea**,
Matsumura sp. nov.

Frutex volubilis. Caulis in sicco limosus, 3-6 cm. diametro ; ramuli angulati, ramulis petiolisque reflexim ferrugineo-tomentosis. Folia subcoriacea, longe petiolata, trifoliolata ; foliola terminalia elliptica vel oblongo-elliptica obtusa mucronulata, basi subrotundata, juvenilia supra parce subtus densius ferrugineo-tomentosa utrinque 5-6 costata ; lateralibus oblique late ovata vel ovato-oblonga obtusiuscula, stipulis parvis ovatis acutis. Flores ignoti. Legumina linearia plano-compressa curvata, longe apiculata, torulosa, ad suturas leviter longitudinaliterque costata nec alata, intus inter semina crasse septata ; valvis crassis, lignosis costis nullis, ferrugineo-tomentosis, pilis urentibus mellis, 4-12 spermis. Semina plana, orbicularia, nigra, hilo lineari fere circumdata, crasse strophiolata.

Petoli 5-8 cm. longi. Foliola terminalia 9-11½ cm. longa, 5-7 cm. lata. Racemi fructiferi 11 cm. longi. Legumina 17-41 cm. longa, 4 cm. lata. Semina 2½ cm. diametro ; hilum 6 cm. longum. Apicula leguminum 2-3 cm. longa, 2-3 septata. Stipes nullus.

Mucuna macrocarpa, Wall, affinis videtur, sed ramulis foliis legumimbusque ferrugineo-tomentosis foliolis obtusis satis differt.

Hab. in Formosa australi : ad Tsui-te-lian detexit C. Ōwatari anno 1898. Mense Januario fr. mat.

Hab. in Liukiu: circa urbem Naha (ipse); ins. Chikubu, Archipel. Yaeyama legit T. Itō (no. 1380) anno 1894; in Formosa boreali, Shintek (T. Makino anno 1896); Tonshee-kac (S. Kawai); in Formosa australi: Honsoang (H. Kawakami, anno 1895); inter Tonkang et Paulyau (C. Ōwatari, anno 1898).

Galactia Tashiroi, Maxim. in Mel. Biol. XII, p. 446; Hemsl. in Journ. Linn. Soc. XXIII, p. 190.

Foliola 36 mm. longa, 29 mm. lata. Racemi $12\frac{1}{2}$ cm. longi, ad 8-flori. Legumina 60 mm. longa, 8 mm. lata.

Taritagit (nom. indigen. Botel-Tobagoense).

Hab. in Liukiu: ins. Ishigaki legit S. Tanaka (no. 277) anno 1890; ins. Miyako legit S. Tachitsu anno 1895 (Herb. T. Itō, no. 1235); locis littoribus ad Naha legit Y. Tashiro anno

1887; eodem loco legit T. Itō (no. 908) anno 1894; ad saxam littoris prope Onnah (ipse anno 1897); ins. Kumesima (H. Kuroiwa); Botel Tobago legit Torie anno 1897.

***Galactia formosana*, Matsumura sp. nov.**

Volubilis. Caulis gracilis teres adpresse puberulus, pilis brevibus reflexis. Folia petiolata, trifoliolata; foliola terminalia elliptica vel oblongo-elliptica distantia: lateralibus parviora, obtusa emarginulata mucronulata basi subcordata, supra pilis brevibus adpresse conspersa, subtus densius pilosa, utrinque 5-nervata. Racemi axillares pauciflori (4-5), floribus plerumque geminatis. Calyx campanulatus parce puberulus punctatus, laciniis lanceolatis acutis, 2 superioribus connatis. Vexillum obovato-ellipticum basi acutum apice emarginulatum, alae obovato-oblongae carinis subaequilongae, unguiculatae, basi auriculatae, auriculis acutis; carina obovato-oblonga. Stamina diadelphica, subaequalia, carinis parum breviora, subdeclinata; antherae oblongae; staminum tubus calycis laciniis parum longior. Ovarium lineare, dense sericeum, brunneo-punctatum, subsessile, 8-ovulatum; stylus ovario aequilongus, glaber, incurvatus, subcircinatus, stigmate punctiforme. Legumina linearia, plana, subfalcata, sericea.

Foliola terminalia 32 mm. longa, 18 mm. lata. Petioli 15-28 mm. longi. Racemi 1-8 cm. longi; pedicelli 3-4 mm. longi. Flores 10 mm. longi; calyx vix 6 mm. longus; vexillum 11 mm. longi, 7 mm. latum; alae 10 mm. longae; carina 10 mm. longa; stylus 13 mm. longus. Legumina 24-37 mm. longa, 5 mm. lata.

A precedente foliorum consistentia indumentoque facile distinguenda; ex descriptione apud Bak. in Hook. f. Fl. Brit. Ind. II, p. 192 *G. tenuiflorae* W. et Arn. accedere videtur, differt tamen foliolis parvioribus racemis paucioribus. An *G. tenuiflora*, var. *villosa* Bak. l.c. et huc *G. tenuiflora* var. *Henry* in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 35?

III, p. 243. *Dalbergia heterophylla*, Willd.; DC. Prodr. II, p. 417.

Flores paniculati; paniculae 3, 4, 7, 12 cm. longae. Foliola 3-7. Bractae minutae ovatae, obtusiusculae, ciliolatae. Calyx subcampanulatus, retusus glabrus, margine ciliolatus vix 4 mm. altus; bracteolae ad basin calycis 2, bracteis similes, minutae. Corolla alba (ex Itô); vexillum reflexum, ovale, apice emarginatum, unguiculatum, basi non callosum; alae oblongae, obtusae

longius unguiculatæ, vix 10 mm. longæ; carinæ obtusæ, alis latiores, 11 mm. longæ. Stamen vexillare ad basin liberum. Ovarium sessile, lineare, in stylum attenuatum, pilosulum, 6-spermum; stylus glaber, incurvus, stigmate terminale punctiforme.

Kee-kadzura (nom. indigen. ins. Yaeyama) ex Tashiro.

Hab. in Liukiu: ins. Okinawa tractus Kushimajiri (Y. Tashiro), (ipse), ins. Iriomote, ad pugum Hoshidate legit T. Itō (no. 1418); insula Iheya (H. Kuroiwa); in Formosa australi: ad pedem montis Takaw, et ad Hai-soa prope Takaw legit C. Ōwatari.

Derris laxiflora, Benth. in Journ. Linn. Soc. IV, Suppl. p. 105; Hemsl. in Journ. Linn. Soc. XXIII, p. 199; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 37.

Hab. in Formosa boreali: ad Hau-hyac-soan prope Kelung legerunt T. Makino et C. Ōwatari.

Derris chinensis, Benth. in Journ. Linn. Soc. IV, Suppl. p. 104; Benth. Fl. Hongk. p. 94; Hemsl. in Journ. Linn. Soc. XXIII, p. 199.

Hitien 魚藤 (nom. indigen.) ex Ōwatari.

Hab. in Formosa boreali-occidentali: Tonsheekac (C. Ōwatari); (S. Yokoyama, no. 27); in Formosa australi-occidentali: jurisdictione Kagi legit Y. Tashiro.

Radices ab indigenis an pisces venenandos adhibentur.

Euchresta Horsfieldii, Bennett. Benth. in Journ. Linn. Soc. IV, Suppl. p. 118; Baker in Hook. f. Fl. Brit. Ind. II, p. 248; Maxim. in Mel. Biol. XII, p. 448; Hemsl. in Journ. Linn. Soc. XXIII, p. 200; Henry in Trans. Asiat. Soc. Jap.

XXIV, Suppl. p. 38. *Andira Horsfieldii*, Lesch. DC. Prodr. II, p. 476.

Hab. in Liukiu : insula Okinawa, monte Ohichadake Tashiro in lit.) ; in Formosa centrali : prope Taitsuikutsu legit Dr. Honda (no. 120).

Planta foetida : adnotavit Dr. Honda. Legumina 2 cm. longa, 13 mm. lata, nigro-purpreo, nitida.

Sophora tomentosa, L. Roxb. Fl. Ind. II, p. 316 ; DC. Prodr. II, p. 95 ; Baker in Hook. f. Fl. Brit. Ind. II, p. 249 ; Benth. Fl. Austral. II, p. 274 ; Hemsl. in Journ. Linn. Soc. XXIII, p. 203 ; Trimen, Fl. Ceyl. II, p. 95 ; G. King in Journ. Asiat. Soc. Beng. LXVI, p. 146 ; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 38.

Hab. in Liukiu : insula Sesoko (Y. Tashiro), insula Yae-yama (Y. Tashiro), insula Takidun, insula Soto-banari (T. Itō, no. 1385, 1484).

Sophora flavescens, Ait. Willd. Sp. Pl. II, p. 499 ; DC. Prodr. II, p. 96 ; Franchet, Pl. David. p. 100 ; Hemsl. in Journ. Linn. Soc. XXIII, p. 202. *S. angustifolia*, Sieb. et Zucc. in Abhand. Ak. Wiss. IV, p. 118 ; Miq. Prol. p. 241 ; Fr. et Sav. Enum. Pl. Jap. I, p. 113.

Hab. in Formosa centrali : in campis prope Polisha legit Y. Tashiro (no. 11). Mense Martio floret.

Cladrastis Tashiroi, Yatabe in Tōkyō Bot. Mag. (1892) VI, p. 345, t. 10.

Folia 11-15. Legumina 18, 38, 40 mm. longa, 8-15 mm. lata, adpresse pilosula.

Hab. in Ōshima (Yamada, Y. Tashiro, S. Tanaka); Nishi Nakama, Naze (T. Itō, no. 560; 721); insula Okinawa (ipse); insula Iheya (H. Kuroiwa).

Caesalpinia Bonducella, Fleming. Roxb. Fl. Ind. II, p. 357; Baker in Hook. f. Fl. Brit. Ind. II, p. 254; Maxim. in Mel. Biol. XII, p. 448; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 38. *Guilandina Bonducella*, L. Benth. Fl. Hongk. p. 96; Benth. Fl. Austral. II, p. 276; Lour. Fl. Cochinch. I, p. 325. *Guilandina Bonduc*, L. var. *minus*, DC. Prodr. II, p. 480.

答肉刺 (nom. indigen) ex Hirase.

Bigi-sarakaki (nom. indigen. Yaeyama) ex Itō.

Hab. in Liukiu: monte Suriyama, ins. Ishigaki legit Y. Aragatchi (Herb. T. Itō, no. 1348); insula Kumesima (H. Kuroiwa); Formosa australi: Tailan (S. Hirase), Hong-soang (H. Kawakami, no. 199), prope Lengalyau (C. Ōwatari).

Legumina $4\frac{1}{2}$ - $6\frac{1}{2}$ cm. longa, 32-38 mm. lata.

Caesalpinia Bonduc, Roxb. Baker in Hook. f. Fl. Brit. Ind. II, p. 255; Trimen, Fl. Ceyl. II, p. 98. *Guilandina Bonduc*, L. DC. Prodr. II, p. 480.

Hab. in Formosa centrali: Linkipo, Unlin (C. Ōwatari).

Racemi robusti, crassi. Legumina 11 cm. longa, $4-4\frac{1}{2}$ cm. lata, longe apiculata, apiculis 15 mm. longis, 4-sperma. Semina ellipsoidea, nigro-purpurea, 17 mm. longa, 10 mm. lata.

Caesalpinia Nuga, Ait. DC. Prodr. II, p. 481; Benth. Fl. Hongk. p. 97; Benth. Fl. Austral. II, p. 277; Baker in Hook. f. Fl. Brit. Ind. II, p. 255; Engler, Bot. Jahrb. VI, p. 64; Maxim. in Mel. Biol. XII, p. 449; Hemsl. in Journ. Linn.

Cassia glauca, Lam.; DC. Prodr. II, 495; Bedd. Fl. Sylv. p. 91; Baker in Hook. f. Fl. Brit. Ind. II, p. 265; Hemsl. in Journ. Linn. Soc. XXIII, p. 210. *Senna arborescens*, Roxb. Fl. Ind. II, p. 345.

Hab. in Formosa orientali-australi: locis sylvaticis prope Taimali tractus Pinang legit Y. Tashiro anno 1896. Mense Octobri fr. mat.

Var. **suffruticosa**, Baker in Hook. f. Fl. Brit. Ind. II, p. 265; DC. Prodr. II, p. 496; Benth. Fl. Austral. II, p. 285; Maxim. in Mel. Biol. XII, p. 455. *Senna speciosa*, Roxb. Fl. Ind. II, p. 347.

Hab. in Liukiu : Insula Ishigaki, Yaeyama cult. (S. Tanaka, no. 278) ; in Formosa boreali : Shintekk (S. Hiraoka).

Cassia mimosoides, L. DC. Prodr. II, p. 505 ; Baker in Hook. f. Fl. Brit. Ind. II. p. 266 ; Benth. Fl. Hongk. p. 98 ; Benth. Fl. Austral. II, p. 291 ; Hemsl. in Journ. Linn. Soc. XXIII, p. 210 ; Trimen, Fl. Ceyl. II, p. 110 ; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 38 ; D. Prain in Journ. Asiat. Soc. Beng. LXVI, p. 477.

Hab. in Liukiu : insula Kumesima (H. Kuroiwa) ; in Formosa boreali : Shintekk (T. Makino).

Bauhinia retusa, Ham.?

Racemi deflorati 14 mm. longi.

Punkii-tieng (nom. indigen.) ex Ōwatari.

Hab. in Formosa boreali : Katooshoo prope Byolitsu (C. Ōwatari) ; in Formosa centrali : Choep-long (C. Ōwatari).

Bauhinia sp.

Hab. in Formosa australi : Subonsha (C. Ōwatari) ; Formosa boreali-centrali : Tsuiboh-liu (C. Ōwatari).

Bauhinia japonica, Maxim. in Mel. Biol. IX, p. 75.

Racemi 10-11 cm. longi, 4-6 cm. lati. Pedicelli fl. 15-20 mm. longi. Flores 2 cm. diametro, viridescens, in sicco nigrescentes. Calycis tomentosis lobis triangulares vel ovati, acuti. Petala reflexa, extus tomentosa. Stamina sub anthesi incurva, demum deflexa. Stylus sub initio recurvus, post anthesi incurvus, stigmatibus terminalibus. Ovarium oblongum, in stylum acuminatum terminatum, albo vel fulvo-tomentosum, 3-ovulatum. Legumina rhomboidalia, plana, fulvo-tomentosum, 35-38 mm. longa, 22 mm. lata, 1-sperma.

Racemi fructiferi 30 cm. longi; pedicelli 2 cm. longi.

Galan-kaza (nom. indigen.) ex Itō.

Hab. in Liukiu: Insula Yaeyama (Y. Tashiro), ad pagum Hoshidate ins. Iriomote legit T. Itō, no. 1419; insula Okinawa (Y. Tashiro, H. Nakagawa), ad Naha, ejusdem insulæ (ipse); insula Iheya (H. Kuroiwa).

Lysidice rhodostegia, Hance in Journ. Bot. (1867) p. 299, (1873) p. 207, (1883) p. 298; Hook. Ic. Pl. XII, p. 80, t. 1192; Hemsl. in Journ. Linn. Soc. XXIII, p. 213.

Hab. in Formosa boreali: Kelung cult. (T. Makino).

Erythrophloeum Fordii, Oliv. in Hook. Ic. Pl. XV, p. 7, t. 1409; Hemsl. in Journ. Linn. Soc. XXIII, p. 214.

Folia superiora pari-bipinnata; pinnæ 2-3 jugæ, oppositæ; foliola 6-9, alternata, distincte petiolulata, oblique ovata vel oblonga, apiculata, in sicco plerumque nigrescentia, supra nitida subtus glabra, reticulata. Legumen coriaceum, circinatim recurvum, oblongo-lineare, plano-compressum, obtuse apiculatum, intus continuum, rubrum, 7 spermum, valvis dehiscentibus; semina plano-ellipsoidea, purpureo-nigra, glauca, funiculis filiformibus rubris.

Pedicelli fructiferi 12 mm. longi. Legumen 9 cm. longum, 2 cm. latum. Semina 1 cm. longa, 8 mm. lata. Funiculus 1 cm. longus. Folia 30 cm. longa; foliola 3-9 cm. longa, 1½-3 cm. lata.

Taitenhon 大疔癩, 斗登鳳 (nom. indigen. Formos.) ex Ōwatari.
孤坎柴 (nom. indigen. sinense) ex Moroto.

Hab. in Formosa boreali: Kelung et Tamsui (T. Makino); in Formosa australi: Tsuiteilyau et Tsuisha (C. Ōwatari); in China: Fokien (H. Moroto).

Entada scandens, Benth. Fl. Austral. II, p. 297 ; Baker in Hook. f. Fl. Brit. Ind. II, p. 287 ; Hemsl. in Journ. Linn. Soc. XXIII, p. 214 ; Trimen, Fl. Ceyl. II, p. 119 ; Henry in Trans. Asiat. Soc. Jap. XXIV, Suppl. p. 38. *E. Gigalobium*, DC. Prodr. II, p. 424. *E. Pursaetha*, DC. l.c. *E. monostachya*, DC. l.c. *E. Adenanthra*, DC. l.c. *Mimosa scandens*, Roxb. Fl. Ind. II, p. 554.

Folia saepissime cirrhis terminata, stipulata, stipulis minutis, glanduliformibus ; foliola 2-3-juga, obliqua, apice emarginata, brevissime petiolulata ; foliorum rachides 4-6½ cm. longæ. Flores suaveolentes (ex Itô), 7 mm. diametro, in sicco nigrescentes, spicati. Spicarum rachides 10-25 cm. longæ, striati, puberuli, lepidoti, furfuracei, bracteis minutis subulatis ciliolatis. Calyx plane cupularis, obscure 5-denticulatus, intus glaber, extus subfurfuraceus. Petala 5, libera, oblonga acuta, subcarnosa, uninervata, aestivatione valvata. Stamina 10, libera, longe exserta, 7 mm. longa ; filamenta clavellata ; antheræ uniformes, ovales, glabræ, glandula rubra coronatæ. Ovarium oblongum, glabrum, brevissime stipitatum ; stylus terminalis, filiformis, 4-5 mm. longus, stigmatе punctiforme retuso. Legumina 6½ cm. lata. Semina 3½ cm. longa, 3 cm. lata, brunnea, nitida.

Subagahnih (nom. indigen.) ex Itô.

Hab. in Liukiu : insula Yaeyama legerunt Y. Tashiro et Kuroiwa ; ins. Ishigaki, monte Suri legit T. Itô (no. 1280, 1349) anno 1895.

LÛTCHÛ (ex *Bentham*, l.c.).

INSULA UTCHINÂ: in monte Katuu-daki in Mutubumadjiri (*Tashiro*! Martio 1887, fl.), in monte Genka in Hanidji-madjiri (*Tashiro*! April. 1887, fl.).

DISTRIB. China, Hongkong.

Tashiro's specimens seem to agree pretty well with *Bentham*'s descriptions (Fl. Hongk. p. 104). Young branches densely clothed with brownish wool, almost concealing the minute prickles. Leaves simple, ovate-cordate, 4-7 cm. long., 4-6 cm. wide, 3- or 5-lobed, sometimes unlobed, the middle lobe longer than the others, covered on the upper side with brownish wool when

young, but soon become glabrous, densely tomentose beneath, with a few short prickles on the midrib, apex acute or obtuse; petiole 2-3 cm. long, also clothed with brownish wool. Inflorescence terminal on new branches, reflexed or arcuate, shorter than the leaves. Flowers 5-7, crowded together in short branches, each 2 cm. in diam.; peduncles about $\frac{1}{2}$ cm. long, highly tomentose. Bracts 1 cm. or more long, $\frac{1}{2}$ -1 cm. wide, deeply divided into narrow lobes. Calyx-lobes subtruncate 5-7 mm. long, densely tomentose. Petals much larger than the calyx-lobes. Filaments glabrous. Carpels numerous.

R. sp.

INSULA UTCHINÂ: in monte Katuu-daki in Mutubumadjiri (*Tashiro!* Martio 1887, fl., s. nom. jap. Okinawa Uradjiro Itsigo, pro part.).

Allied to the above, but differs by the following characters:

Branches erect (?), more slender, thinly tomentose and less prickly. Leaves ovate-oblong or ovate, 6-10 cm. long, 3-6 $\frac{1}{2}$ cm. wide, glabrous on both sides, or sparsely clothed with brownish wool beneath, apex acuminate or sometimes obtuse; petiole 1-1 $\frac{1}{2}$ cm. long. Inflorescence erect, exceeding the leaves. Flowers about 5-6, each on a long peduncle, which is 2-3 cm. long, densely clothed with brownish wool. Bract none.

There are some specimens from Formosa, collected by Makino, very closely related to the Luchuan plant, especially by the form of leaves, but different in being thickly clothed with brownish wool on the under side.

R. Grayanus, Maxim. in Mél. Biol. VIII (1872) p. 382 ; Forbes et Hemsl. Ind. Fl. Sin. I, p. 231.

Crassula pinnata, L. f. Suppl. p. 191; Lour. Fl. Cochinch. p. 185.

Kalanchoe pinnata, Pers. Syn. I, p. 446; Hance, in Journ. Linn. Soc. XIII (1872) p. 103.

INSULA AMAMI-ŌSHIMA: ad portum Nazé (*T. Itō*, n. 502, 15 Julio 1894, steril.).

INSULA UTCHINĀ: in portu Nāfa (*T. Itō*, n. 888, 17 Aug. 1894, steril.) ad Idzunzatchi-mura (*Yamada*! 1882, steril.); in oppido Shui (ex *T. Itō*, *Kuroiwa* e *Makino*); circa Tchatan (*S. Tanaka*! n. 70, 15 Majo 1891, fl.).

INSULA MYĀKU, ex *T. Itō*.

NOM. LUTCH.: Ushiti (U.), ex *Tashiro* in litt.; Orandagusa seu Dan-sō (Ō), ex *T. Itō*.

DISTRIB. Said to be the native of tropical Africa, but now dispersed in warm countries, including Formosa, Hong-kong, South China, India, Mexico and Madeira.

Kalanchoe, Adans.

K. spathulata, DC. "Pl. Grasses, t. 65," et Prodr. III, p. 495; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 414; Maxim. in Mél. Biol. XI (1883) p. 721; Forbes et Hemsl. Ind. Fl. Sin. I, p. 281.

K. crenata, Britten, in Oliv. Fl. Trop. Afr. II, p. 394, pro parte.

K. nudicaulis, Buch.-Ham. ex Clarke, in Hook. f. Fl. Brit. Ind. II, p. 414.

K. varians, Haw. in "Phil. Mag. Lond. n.s. IX (1829) p. 302"; Hook. f. et Thoms. in Journ. Linn. Soc. II (1858) p. 91.

Cotyledon spathulata, Poir. Encycl. Suppl. 2, p. 373.

LÛTCHÛ (*Wright*): ad portum Nâfa, in muris gregaria (*Weyrich*), see. *Maxim.*

DISTRIB. South China, Burma, tropical India and Java.

Sedum, L.

S. lineare, Thunb. Fl. Jap. p. 187; DC. Prodr. III, p. 410; Miq. Prol. Fl. Jap. p. 88, excl. γ et δ ; Franch. et Sav. Enum. Pl. Jap. I, p. 161; Maxim. in Mél. Biol. XI (1883) p.

763; Forbes et Hemsl. Ind. Fl. Sin. I, p. 285; Shitsumon Honzō, Gwai-hen, III, t. 9.

LŪTCHŪ, sec. Shitsumon Honzō, l.c.

DISTRIB. Japan.

Maximowicz identified this species by the figure in the Shitsumon Honzō, loc. cit.

S. uniflorum, Hook. et Arn. Bot. Beech. Voy. p. 263; Walp. Repert. II, 261; Forbes et Hemsl. Ind. Fl. Sin. I, p. 288.

LŪTCHŪ (*Beechey*, *Wright*, sec. *Forbes et Hemsl.*, *H. Nakagawa*! n. 90, steril.).

INSULA UTCHINĀ (*Tashiro*! April. 1887, flor.): in tractu Nakugan ad Yuntanza (*S. Tanaka*! n. 54, 15 Majo 1891, flor.); in maritimis arenosis inter Unna et Nagu (*T. Itō*, n. 1066, 23 Aug. 1894).

ARCHIPELAGO YĒMA (*Tashiro*! Aug. 1887, flor.): insula Kuru-shima (ex *Tashiro*).

DISTRIB. Endemic.

Tashiro's specimens have small, obscure flowers, one on the top of the stem and on each of the many branches; stamens shorter than the perianth, anther oblong-globose, filament filiform and glabrous.

S. Alfredi, Hance, in Journ. Bot. VIII (1870) p. 7; Maxim. in Mél. Biol. XI (1883) p. 768; Forbes et Hemsl. Ind. Fl. Sin. I, p. 283.

S. lineare var. *γ. floribundum*, Miq. Prol. Fl. Jap. p. 89, fide Maxim.

S. bulbiferum, Makino ! Ill. Fl. Jap. I, n. 10, p. 2, t. 60.

INSULA UTCHINÂ : in tractu Nakugan (*Tashiro* ! April. 1887, fl.) ; in tractu Shimadjiri circa Tumigushiku (*S. Tanaka* ! n. 11, 13 Majo 1891, fl.).

DISTRIB. Japan and China.

Tashiro's specimens seem to agree exactly with Hance's diagnosis of *S. Alfredi*.

S. Makinoi, Maxim. (?) in Mém. Biol. XII (1888) p. 728.

INSULA AMAMI-ŌSHIMA (*Tashiro* ! Sept. 1887, steril.).

INSULA UTCHINÂ : inter Tchatan et Unna (*T. Itô*, n. 991, 22 Aug. 1894, steril.).

Stem procumbent, often rooting at the nodes.

In the form of leaves, our specimens agree with the Japanese *S. Makinoi*, Maxim., but we should like to defer pronouncing as to their identity until we examine more complete specimens.

S. sp.

INSULA AMAMI-ŌSHIMA : inter Nazé et Yamatohama (*T. Itô*, n. 563, 6 Julio 1894, steril.).

Stem thick, fleshy, suberect (?), not procumbent. Leaves alternate or aggregate, glabrous, fleshy, obovate or obovate-spathulate, attenuate toward the base, entire.

S. sp.

INSULA MYÁKU (*Tashiro* ! Julio 1887, frf.).

Tashiro's specimens, with many fruits consisting of straight and acuminate carpels ; and collected after defoliation and de-

siccation in the state of nature, are too imperfect for specific determination.

DROSERACEÆ.

Drosera, L.

D. Burmanni, Vahl, "Symb. III, p. 50"; DC. Prodr. I, p. 318; D. Don, Prodr. Fl. Nep. p. 212; Roxb. Fl. Ind. II, p. 113; Wight et Arn. Prodr. Fl. Pen. Ind. Or. NOM. LUTCH.: Hama-kaniiki (Y.) ex *T. Itō*.

DISTRIB. Formosa, Malaya, India, Ceylon, tropical Africa, Madagascar, N. Australia and Polynesia.

I found this small tree growing among mangroves in the swampy ground along the coast of the island of Irumuti in the Yêma Archipelago. The stem is short and copiously branched. Leaves $2\frac{1}{2}$ – $5\frac{1}{2}$ cm. long, 1–2 cm. broad, thick, coriaceous, smooth, obovate-cuneate or spatulate, entire, apex obtuse or retuse, sometimes emarginate, subsessile. Racemes axillary; ascending, 8–17 mm. long, few or many-flowered; flowers 10–13 mm. long; calyx-tube oblong, with 2 adnate bracteoles; petals 5, white; stamens 10. Fruits 10–13 cm. long, woody, ovate or elliptic-oblong, fusiform. [*T. Itō*].

Observ. B. SPECIOSA, Forst. The fruit of this widely distributed species, being carried by ocean-currents, are often cast ashore the Lûchû Islands. I myself found one in 1894 on

the shore of Sutubanari-jima, an uninhabited island among the Yêma Archipelago, situated close to Formosa. Tashiro states that he collected quite a number of specimens of this fruit on the coast of Hatiruma Island, also belonging to the Yêma Archipelago. Henry (List Pl. Formos. p. 43) mentions this species as also found in Formosa. [T. Itô].

Flores 4-meri. Calycis glaberrimi tubus turbinato-campanulatus, 4-gonus; 4-lobatus, lobis late triangularibus retusis vel cuspidatis, dorso alatis. Petala 4, elliptica vel ovalia, glabra, interdum unguiculata, aestivatione contorta. Stamina 8, subaequalia, conformia, filamentis filiformibus, planis; antherae lineari-subulatae, apice minute 1-porosae, loculis haud undulatis, connectivo basi non producto, antice biauriculato, postice tuberculato. Ovarium fundo calycis adnatum, 4-loculare, vertice glaberrimum late exsculptum, marginibus angulatis; stylus filiformis, suberectus, stigmate punctiforme. Capsula ovoideo-obconica, calyce coriaceo alato inclusa, vertice loculicide 4-valvis, exsculpta. Semina recta, clavata, aspera, hilo basilari.

Fruticuli, caule lignoso ramoso, ramis lignosis. Folia opposita longe petiolata oblonga denticulata, 3-nervia, subtus discoloria, petiolis intus furfuraceis. Flores rosei, majusculi, cymoso-umbellati. Pedicelli articulati.

Genus ex tribus Sonerileae^{2,3)} vel Casseberieae⁴⁾ juxta *Phyllagathidem* Bl. collocandum, differt calycis lobis persistentibus dorso non setosis, antheris basi non discretis, connectivo antice biauriculato, postice tuberculato, stylo erecto.

A *Barthea*, Hook. f. differt antheris conformibus, connectivo antice non bisetoso, ovario vertice glabro, pedicellis basi nudis.

Tashiroea yaeyamensis *Matsumura*.

Caulis lignosus teres brunneus ramosus, nodiis tumidis; foliis ampliis in sicco nigrescentibus longe petiolatis oblongis vel

4) Melastomaceae von Frid. Krasser in Engl. et Prant. Natürl. Pflanzenf. p. 174.

obovato-oblongis acuminatis basi rotundatis plicatis 3-nerviis denticulatis, lamelloso-marginatis, supra sub lente albo-punctulatis subtus discoribus glabris, laminis in petiolas subdecurrentibus, nerviis lateralibus cir. 16 subpatentibus; floribus terminalibus in cymas glabrescentes dispositis, pedicellis articulatis, articulis furfuraceis bibracteatis, bracteis subulatis; calyce subfurfuraceo, lobis brevissimis.

Speciminibus nostris partes inferiores desunt. Caules supp. 200 mm. longi. Folia supp. maxima 223 mm. longa, 55 mm. lata. Cymae 40-80 mm. latae, 40-50 mm. longae. Pedicelli fruct. 7-8 mm. longi, subarcuati. Flores circiter 20 mm. diametro. Petala 10 mm. longa, 8-9 mm. lata. Stamina longiora 19 mm. longa; breviora 13 mm. longa, glabra; antherae stam. brev. 8 mm. longae, subsigmoideo-recurvae; stam. long. 10-12 mm. longae. Stylus 18 mm. longus. Capsula subcarnosa, 5 mm. longa et lata, usque medium dehiscens, valvis dorso sulcatis.

Hab. in Yaeyama, legit Y. Tashiro mense Augusto anno 1887; Iriomote (*S. Tanaka* no. 345) anno 1890.

var. **Tanakaea** *Matsumura*.

Foliis in sicco brunneis longe petiolatis obovato-ellipticis acutiusculis; floribus pedicellatis, roseis, in cymas terminales paucifloras dispositis, calyce fruct. sursum alato. A typo differt foliis brevioribus et obtusioribus.

Folia 100 mm. longa, 40 mm. lata. Petioli 15 mm. longi.

Hab. insula Iriomote archipelagi Yaeyama, legit S. Tanaka mense Julio anno 1890, no. 344.

Tashiroea okinawensis *Matsumura*.

Caulibus lignosis, brunneis glabris ramosis, ramis subteragonis junioribus rufo-furfuraceis foliis longe petiolatis oblongo-lanceolatis, utrinque acutis denticulatis, 3-nerviis, supra glabris, lamello-marginatis subfurfuraceis demum glabrescentibus, subtus glabris subfurfuraceo-punctulatis discoribus interdum purpurascentibus; floribus solitariis vel pauci-cymosis, subfurfuraceis,

pedicellis articulatis, calyce subfurfuraceo demum glabrescente, fruct. non alatis pedicellis valvisque sub lente ciliis nigris vestitis.

Specimina supp. 189-400 mm. alta. Pedicelli 4-6 mm. longi. Petala 12 mm. longa 7 mm. lata, interdum subunguiculata, glabra.

A praecedente differt foliis parvioribus, nerviis lateralibus non conspicuis floribus paucioribus calyce fruct. et capsulis ciliolatis.

Hab. in montosis tractus Kunchan ins. Okinawa legit Y. Tashiro mense Aprili anno 1887; juxta Ōura ejusdem insulæ (*S. Tanaka*, no. 216); eadem insula (*J. Matsumura*).

INSULA UTCHINÂ : in oppidum Shui, cult. (ex *T. Itō*) ; as Ūfugimi (*Matsumura* ! 1897, fl. ♂).

INSULA MYÂKU, cult. (*T. Itō*, n. 1165, 9 Aug. 1894, fl. ♂ et ♀).

NOM. LUTCH. : Banshō-in (U.) ex *T. Itō*.

DISTRIB. Native of tropical America, and very widely cultivated in tropical countries of the both hemispheres. Also cultivated in Formosa (*Makino* ! 1896, "cultivated"), but not in Japan.

CUCURBITACEÆ.

Trichosanthes, L.

* ? **T. Auguina**, L. Sp. Pl. ed. 1, p. 1008 ; Lam. Encycl. I, p. 190, et Illustr. III, p. 375, t. 794 ; Lour. Fl. Cochinch. p. 588 ; Willd. Sp. Pl. IV, p. 598 ; Blume, Bijdr. p. 933 ; Bot. Mag. t. 722 ; Seringe, in DC. Prodr. III, p. 314 ; Roxb. Fl. Ind. III, p. 701 ; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 350 ; Miq. Fl. Ind. Bat. I, pt. 1, p. 677 ; "Naud. in Ann. Sc. Nat. ser. 4, XVIII (1862) p. 91" ; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 610 ; Cogn. in DC. Monogr. Phanerog. III, p. 359 ; Forbes et Hemsl. Ind. Fl. Sin. I, p. 312.

Anguina sinensis, etc., Mich. "Gen. p. 12, t. 9."

Cucumis Anguinis, L. "Sp. Pl. ed. 2, p. 1437"; Willd. Sp. Pl. IV, p. 615.

Cucurbita sinensis, etc., Till. "Pis. p. 49, t. 22."

Involucraria Anguina, M. Rœm. "Syn. Pepon. p. 97."

Trichosanthes colubrina, Jacq. f. "Eclog. t. 128."

T. Turolata, Buch.-Hamilt. ex "Wall. Cat. n. 6688 A."

INSULA MYĀKU (*Tashiro*! Julio 1889, steril.). An culta vel spontefacta?

DISTRIB. Native locality uncertain; cultivated in China, Malaya and India. Clarke suggests that it is a cultivated race of *T. cucumerina*, L., a native of India, from which it differs only in the fruit.

As the fruit is deficient, we cannot decide whether *Tashiro*'s specimens belong to this species or to *T. cucumerina*, L.

T. japonica, Regel, "Ind. Sem. Hort. Petrop. 1868 [1869] p. 90"; Maxim. in Gartenfl. 1872, p. 35, t. 714; Franch. et Sav. Enum. Pl. Jap. I, p. 172; Cogn. in DC. Monogr. Phanerog. III, p. 371.

T. cucumerina, Thunb. Fl. Jap. p. 332 (non L.).

Gymnopetalum japonicum, Miq. Prol. Fl. Jap. p. 14.

INSULA AMAMI-ŌSHIMA: inter Taken et Nishinakama (*T. Itō*, n. 680, 19 Julio 1894, fl.).

DISTRIB. Japan.

T. bracteata, Voigt, "Hort. Suburb. Calc. p. 58"; Cogn. in DC. Monogr. Phanerog. III, p. 375.

T. aspera, Heyne, in "Herb. Rottl. ex Steud. Nomencl."

T. asperifolia, Zipp. ex "Spanoghe, in Linnæa, XV, p. 206 (nomen)."

T. Kakidonta, Roxb. ex Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 350.

T. laciniosa, Wight, ex "Wall. Cat. n. 6689 A, B."

T. palmata, Roxb. "Hort. Beng. p. 70," et Fl. Ind. III, p. 704; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 350; "Wight, Illustr. tt. 104 et 105"; Walp. Repert. II, p. 202; Miq. Fl. Ind. Bat. I, pt. 1, p. 678; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 606, excl. syn.

T. pubera, Blume, Bijdr. p. 936; Seringe, in DC. Prodr. III, p. 315.

T. tricuspis, Miq. Fl. Ind. Bat. I, pt. 1, p. 679.

Involucraria cucumerina, M. Rœm. "Syn. Pepon. p. 97."

I. Modecca, M. Rœm. "Syn. Pepon. p. 98."

I. palmata, M. Rœm. "Syn. Pepon. p. 98."

I. Wightiana, M. Rœm. "Syn. Pepon. p. 98."

Modecca? bracteata, Lam. Encycl. IV, p. 210 (1797); "Spreng. Syst. III, p. 45"; DC. Prodr. III, p. 337.

INSULA AMAMI-ŌSHIMA: inter Nazé et Nishinakama (*T. Itō*, n. 729, 20 Julio 1894, flor.).

DISTRIB. Japan, Malaya, India and Ceylon.

Lagenaria, Ser.

* **L. vulgaris**, Ser. in "Mém. Soc. Phys. Genève. III, pt. 1 (1825) p. 25," et in DC. Prodr. III, p. 299; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 341; "M. Rœm. Syn. Pepon. p. 60"; "Wight, Illustr. t. 105 *"; Torr. et Gray, Fl. N. Am.

I, p. 543; "Naud. in Ann. Sc. Nat. ser. 4, XII (1862) p. 91, et ser. 5, V (1866) p. 8"; Grisebach, Fl. Brit. W. Ind. Isl. p. 288; Hook. f. in Oliver, Fl. Trop. Afr. II, p. 529; Harvey et Sond. Fl. Cap. II, p. 489; Benth. Fl. Austral. III, p. 316; Franch. et Sav. Enum. Pl. Jap. I, p. 175; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 613; Cogn. in "Mart. Fl. Brasil. fasc. 78, p. 8," et in DC. Monogr. Phanerog. III, p. 417; Forbes et Hemsl. Ind. Fl. Sin. I, p. 314, in adnot.; Hillebrand, Fl. Hawaii. Isl. p. 134; Henry, List Pl. Formos. p. 45.

L. cochinchinensis, M. Rœm. "Syn. Pepon. p. 61."

L. hispida, Ser. in DC. Prodr. III, p. 299.

L. idolatrica, Ser. in DC. Prodr. III, p. 299.

L. microcarpa, Naud. in "Rev. Hort. (1855) p. 65, cum ic. col."

L. vittata, Ser. in DC. Prodr. III, p. 299.

Cucurbita idololatrica, Willd. Sp. Pl. IV, p. 607; Blume, Bijdr. p. 930.

C. Lagenaria, L. Sp. Pl. ed. 1, p. 1010; Lam. Illustr. t. 795; Willd. Sp. Pl. IV, p. 606; Thunb. Fl. Jap. p. 323; Roxb. Fl. Ind. III, p. 718.

C. leucantha, Duchesne, in Lam. Encycl. II, p. 150.

C. siceraria, Molina, "Sag. Chile, p. 133"; Willd. Sp. Pl. IV, p. 607; Ser. in DC. Prodr. III, p. 318.

C. vittata, Blume, Bijdr. p. 932.

LÚTCHŪ, ex *Tashiro* in MS. Cult.

DISTRIE. Native country uncertain: cultivated in the tropics and warm temperate zones of the whole world. Also cultivated in Japan, Formosa, China and India.

Luffa, [Tourn.] L.

* **L. cylindrica**, M. Rœm. "Syn. Pepon. p. 63 (1846)"; "Naud. in Ann. Sc. Nat. ser. 4, XII (1859) p. 119"; Cogn. in DC. Monogr. Phanerog. III, p. 456, cum plur. synonym; Forbes et Hemsl. Ind. Fl. Sin. I, p. 315.

L. aegyptiaca, Mill. "Gard. Diet. ed. VIII"; Ser. in DC. Prodr. III, p. 303; "M. Rœm. Syn. Pepon. p. 64"; Miq. Fl. Ind. Bat. I, pt. 1, p. 666; Benth. Fl. Austral. III, p. 317; Hook. f. in Oliver, Fl. Trop. Afr. II, p. 530; "Cogn. in Mart. Fl. Bras. fasc. 78, p. 10"; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 614.

L. Cattu-Picinna, Ser. in DC. Prodr. III, p. 303; "M. Rœm. Syn. Pepon. p. 64."

L. foetida, Sieb. et Zucc. Fl. Jap. Fam. Nat. in Abhandl. Akad. Muench. IV, pt. 2 (1845) p. 168 (non Cav.).

L. pentandra, Roxb. "Hort. Beng. p. 60," et Fl. Ind. III, p. 712; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 343; Wight, Ic. Pl. Ind. Or. t. 499, et "Illustr. t. 105 bis"; "M. Rœm. Syn. Pepon. p. 65"; Miq. Fl. Ind. Bat. I, pt. 1, p. 667.

L. Petola, Ser. in DC. Prodr. III, p. 303; "M. Rœm. Syn. Pépon. p. 65"; Miq. Fl. Ind. Bat. I, pt. 1, p. 667; Miq. Prol. Fl. Jap. p. 13; Franch. et Sav. Enum. Pl. Jap. I, p. 174.

Karivia? *longicirra*, Miq. Prol. Fl. Jap. p. 12.

Momordica cylindrica, L. Sp. Pl. ed. 1, p. 1009; Lam. Encycl. IV, p. 241; Willd. Sp. Pl. IV, p. 604; Ser. in DC. Prodr. III, p. 311; "M. Rœm. Syn. Pepon. p. 67."

M. Luffa, L. Sp. Pl. ed. 1, p. 1009; Lam. Encycl. IV, p. 240; Lour. Fl. Cochinch. p. 590; Willd. Sp. Pl. IV, p. 603.

LÛTCHÛ, cult. ex *Tashiro* in MS.

DISTRIB. Native country uncertain; cultivated throughout the tropical and subtropical zones of the world. Also cultivated in Japan, China and India.

Benincasa, Savi.

* **B. cerifera**, Savi, in "Bibl. Ital. IX, p. 158 (1818)"; Ser. in "Mém. Soc. Phys. Genève. III, pt. 1 (1825) t. 4," et in DC. Prodr. III, p. 303; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 344; "M. Rœm. Syn. Pepon. p. 62"; Miq. Fl. Ind. Bat. I, pt. 1, p. 665; "Naud. in Ann. Sc. Nat. ser. 4, XII (1862) p. 87"; Hook. f. in Oliver, Fl. Trop. Afr. II, p. 532; Clarke, in Hook. f. Fl. Brit. Ind. II, p. 616; Forbes et Hemsl. Ind. Fl. Sin. I, p. 315.

B. hispida, Cogn. in DC. Monogr. Phanerog. III, p. 513.

Cucurbita cerifera, Fisch. "Cat. Hort. Gorenk, ex Savi, in Bibliot. Ital. IX (1818) p. 158."

C. farinosa, Blume, Bijdr. p. 931; Ser. in DC. Prodr. III, p. 317; "M. Rœm. Syn. Pepon. p. 91."

C. hispida, Thunb. Fl. Jap. p. 322 (1784); Willd. Sp. Pl. IV, p. 608; Blume, Bijdr. p. 931.

C. Pepo, Lour. Fl. Cochinch. p. 593; Roxb. Fl. Ind. III, p. 718 (non L.).

C. villosa, Blume, Bijdr. p. 931; Ser. in DC. Prodr.

III, p. 317 ; “ M. Rœm. Syn. Pepon. p. 91 ” ; Miq. Fl. Ind. Bat. I, pt. 1, p. 672.

Lagenaria? dasystemon, Miq. Prol. Fl. Jap. p. 13 ; Franch. et Sav. Enum. Pl. Jap. p. 173.

L.? hispida, Ser. in DC. Prodr. III, p. 299 ; “ M. Rœm. Syn. Pepon. p. 61 ” ; Miq. Fl. Ind. Bat. I, pt. 1, p. 669.

Gymnopetalum septemlobum, Miq. Fl. Ind. Bat. I, pt. 1, p. 679.

LÚTCHŪ, culta, ex *T. Itō*.

NOM. LUTCH.: Shibui (U.) ; Shiburu (Y.) sec. *T. Itō*.

DISTRIB. Native country uncertain ; cultivated in Japan, China, Malaya (including the Philippine Islands), India, Africa and Polynesia.

Momordica, [Tourn.] L.

* **M. Charantia**, L. Sp. Pl. ed. 1, p. 1009 ; Lour. Fl. Cochinch. p. 589 ; Lam. Encycl. IV, p. 239, t. 794, f. 2 ; Willd. Sp. Pl. IV, p. 602 ; Bot. Mag. t. 2455 ; Ser. in DC. Prodr. III, p. 311 ; Roxb. Fl. Ind. III, p. 707 ; Wight et Arn. Prodr. Fl. Pen. Ind. Or. I, p. 348 ; Torr. et Gray, Fl. N. Am. I, p. 543 ; Wight, Ic. Pl. Ind. Or. t. 504, et “ Illustr. t. 105 bis ” ; “ M. INSULA UTCHINÂ (*Tashiro*! April. 1887, frf.).

ARCHIPELAGO YÈMA : insula Yunakuni ad montem Ura-bu-daki (*S. Tanaka*! n. 397, 13 Junio 1891, frf.).

DISTRIB. Formosa, Malaya, India, Ceylon, tropical Africa, Mauritius and Australia.

Leaves scabrous and white-punctuate above, smooth below, broad, 5-8 cm. long, 6-9 cm. wide, palmately 5-fid, lobes ovate or ovate-lanceolate, slightly sinuate-toothed, teeth mucronate; petiole 4-6 cm. long, or often longer than the lamina, glabrous or sometimes muricate. Tendrils 2-branched, one branch being often smaller. "Flowers yellow" (*Tashiro* in msc.). Fruit baccate, globular, smooth, "bright red with white vertical stripes" (*Tashiro* in msc. and *S. Tanaka* in sched.), about 2 cm. diameter. Seeds obovoid, with a thickened corrugate margin, the faces conical with protuberances, 7 mm. long, 4 mm. wide, $4\frac{1}{2}$ mm. thick.

dentatis supra punctis callosis albis onustis subtus glabris, cirrhis
simplicibus," Hooker et Arnott, Bot. Beech. Voy. p. 263, from
Lûchû is an obscure plant. It seemed at first to be *Bryonopsis*
laciniosa, Naud., but it differs by its tendrils being simple and
not bifurcate; nor can it be *Mukia scabrella*, Arn., the leaves
of which are highly scabrid on both sides and not glabrous be-
low; nor shall we attempt to identify it with *Zehneria Baueri-*
ana, Endl., as the latter is unknown to us.
